- 338 DC. Parasites and Parasitic Diseases of Dogs.
- 1603 Y. The Breeding of Fur Animals.
- 1777 F. Diseases of Fur Animals.
- 47 L. Hygiene in Fox Farming.
- 1568 F. Rabbit Parasites and Diseases.

"WORLD'S LARGEST VETERINARY CONVENTION"

August 11-15, 1941, are the dates set for the "World's Largest Veterinary Convention" at Indianapolis—the 78th annual convention of the American Veterinary Medical Association.

There are over 600 veterinarians in Indiana and each one has pledged himself to make your visit to the next meeting of the Association one that you will long remember. These 600 hosts are from every walk of veterinary life—practice, military, research, education, regulatory and commercial.

Central Location

Indianapolis is one of the most conveniently located cities in the country. It is within 30 hours of 85 per cent of the population of the United States. More veterinarians live within a radius of 500 miles of Indianapolis than within a similar radius of any other large city in the country.

Indianapolis is laid out on a plan similar to that of the nation's capitol—a central circle with four radiating avenues. At the hub of the city is the Monument Circle, the site of the famous Soldiers' and Sailors' Monument—long one of the city's most distinguishing marks. It is second only to the Washington monument in height and is regarded as the finest piece of monumental architecture in the world.

CONVENTION—

(Continued from page 92)

Interesting Sights

Members of the A.V.M.A. will wish to see such interesting places as the former homes of James Whitcomb Riley, Benjamin Harrison, Booth Tarkington, Meredith Nicholson and Charles Warren Fairbanks; the Indiana Soldiers' and Sailors' Monument; Indiana's \$15,000,000 World War Plaza; American Legion National Headquarters; Indianapolis Motor Speedway; the Sunken Gardens of Garfield Park and many of the more interesting industrial plants. More than 1200 different commodities are manufactured here.

Hundreds of veterinarians, convention-bound toward Indianapolis, will pass over a part of Indiana's 12,000 mile network of modern state highways. You will find them leading through ever-interesting scenery—from the industrial areas and the beautiful lake regions of the north through the rich agricultural middle section and to the rugged, picturesque coun-

try of the south with its mines and river ports.

The State Parks—offering ideal facilities for a day or a week's stop-over as an adjunct to the convention trip—are the pride of all Hoosierdom. It matters not what direction you are coming from, you will find one or more of these splendid parks either on your highway or so near it that you cannot afford to miss the opportunity of paying it a visit.

The city's 37 recognized hotels—representing more than 7,000 rooms—will be prepared to extend true Hoosier hospitality to each of you and your family.

Start planning now to attend the Indianapolis convention.

Workers at the University of California have recently reported that coating the skin of the chicken with fat invariably causes dermatitis. If the external application covers too much of the surface of the skin, the resulting dermatitis may prove lethal.
