**[www.uiuc.edu](http://www.uiuc.edu)**

# Outline

**Energy in DDGS**  
**Energy in low-fat**  
**DDGS**  
**AA in low fat DDGS**  
**Conclusions**

# Classes of Nutrients

**Energy is Not a  
Nutrient!**

- **Water**
- **Protein**
- **Carbohydrates**
- **Lipids**
- **Vitamins**
- **Minerals**

# Metabolism crate

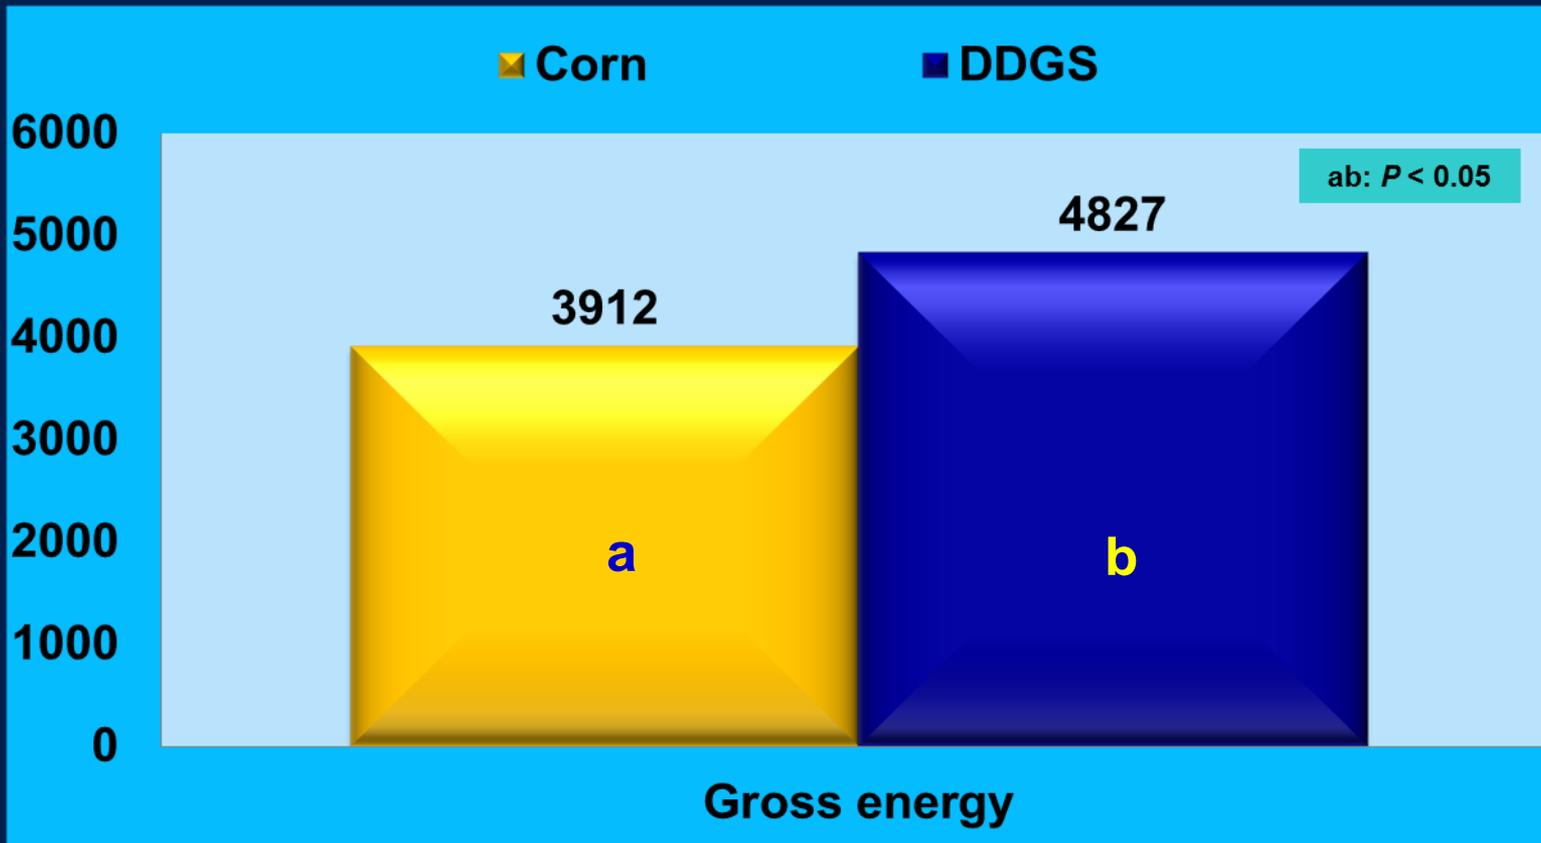

# Sample Collections

# GE in corn and DDGS (kcal/kg)

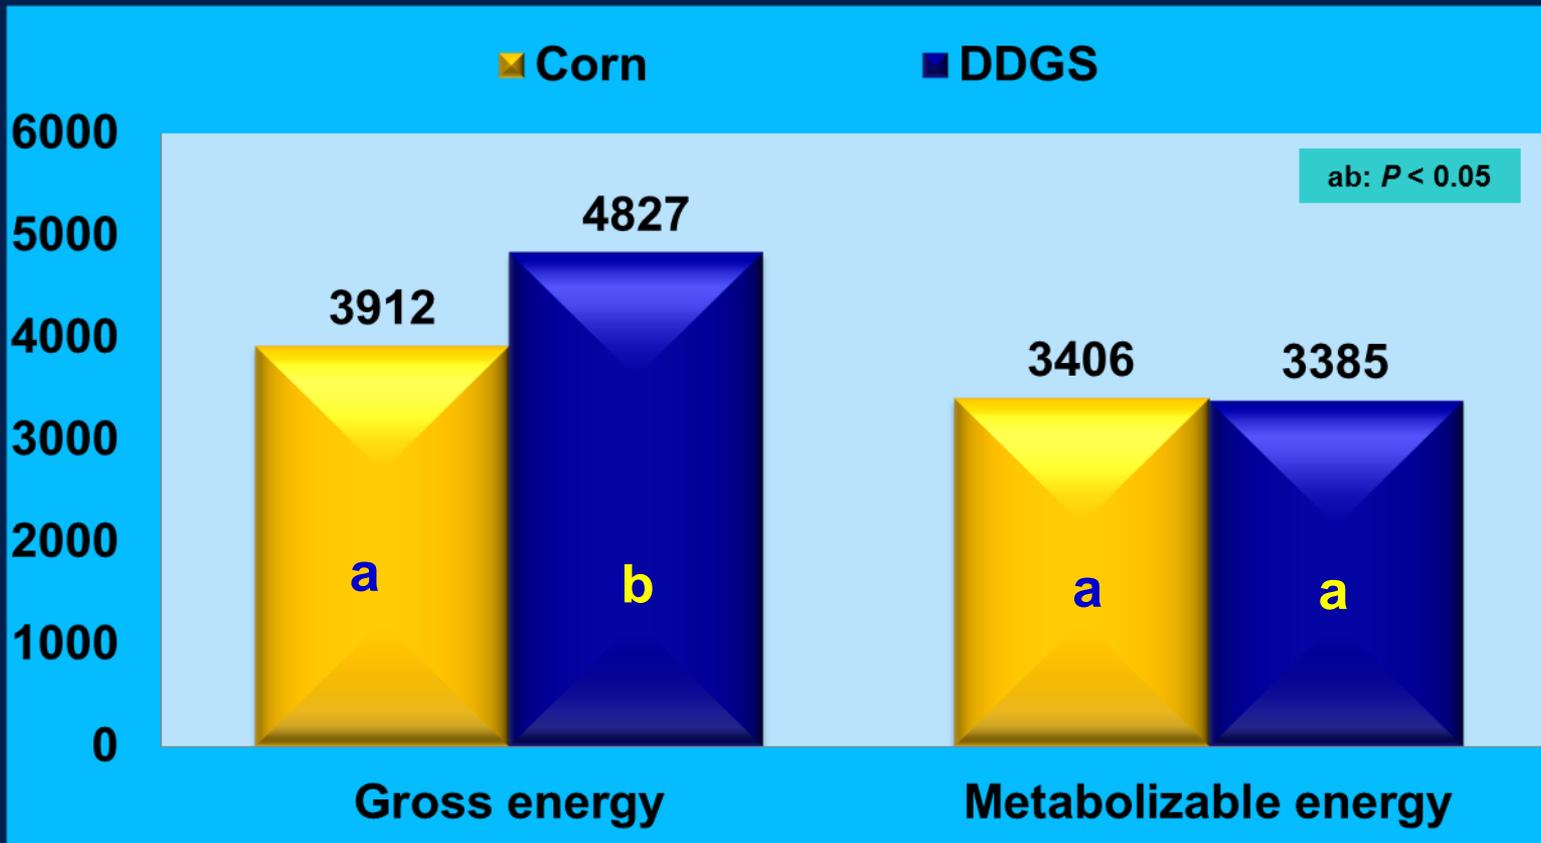

Corn: N = 41; DDGS, N = 12

Univ. IL., 2014

# GE and ME (kcal/kg)

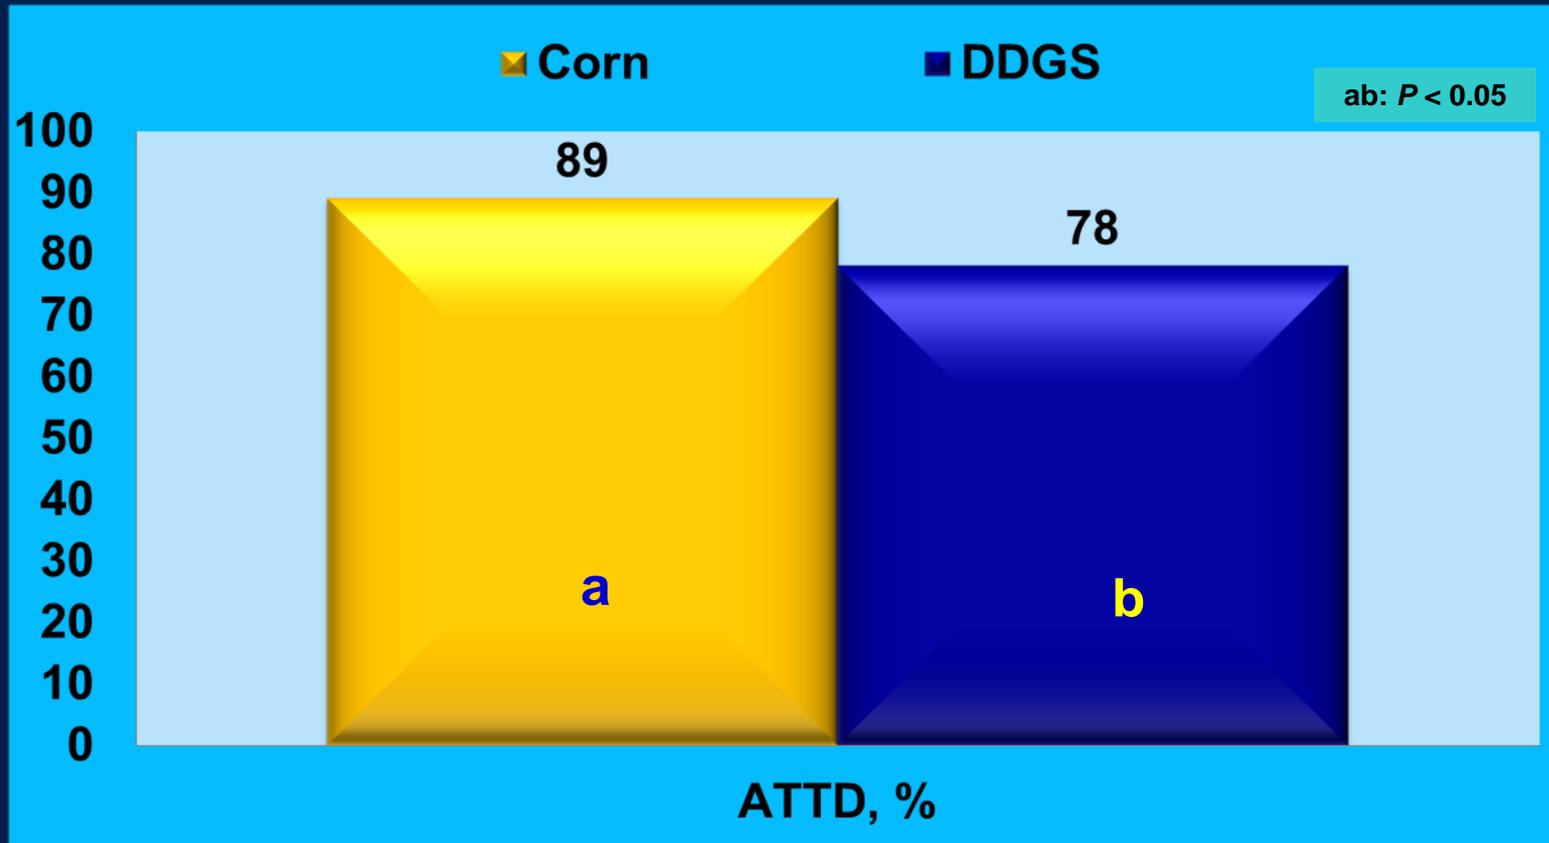

Corn: N = 41; DDGS, N = 12

Univ. IL., 2014

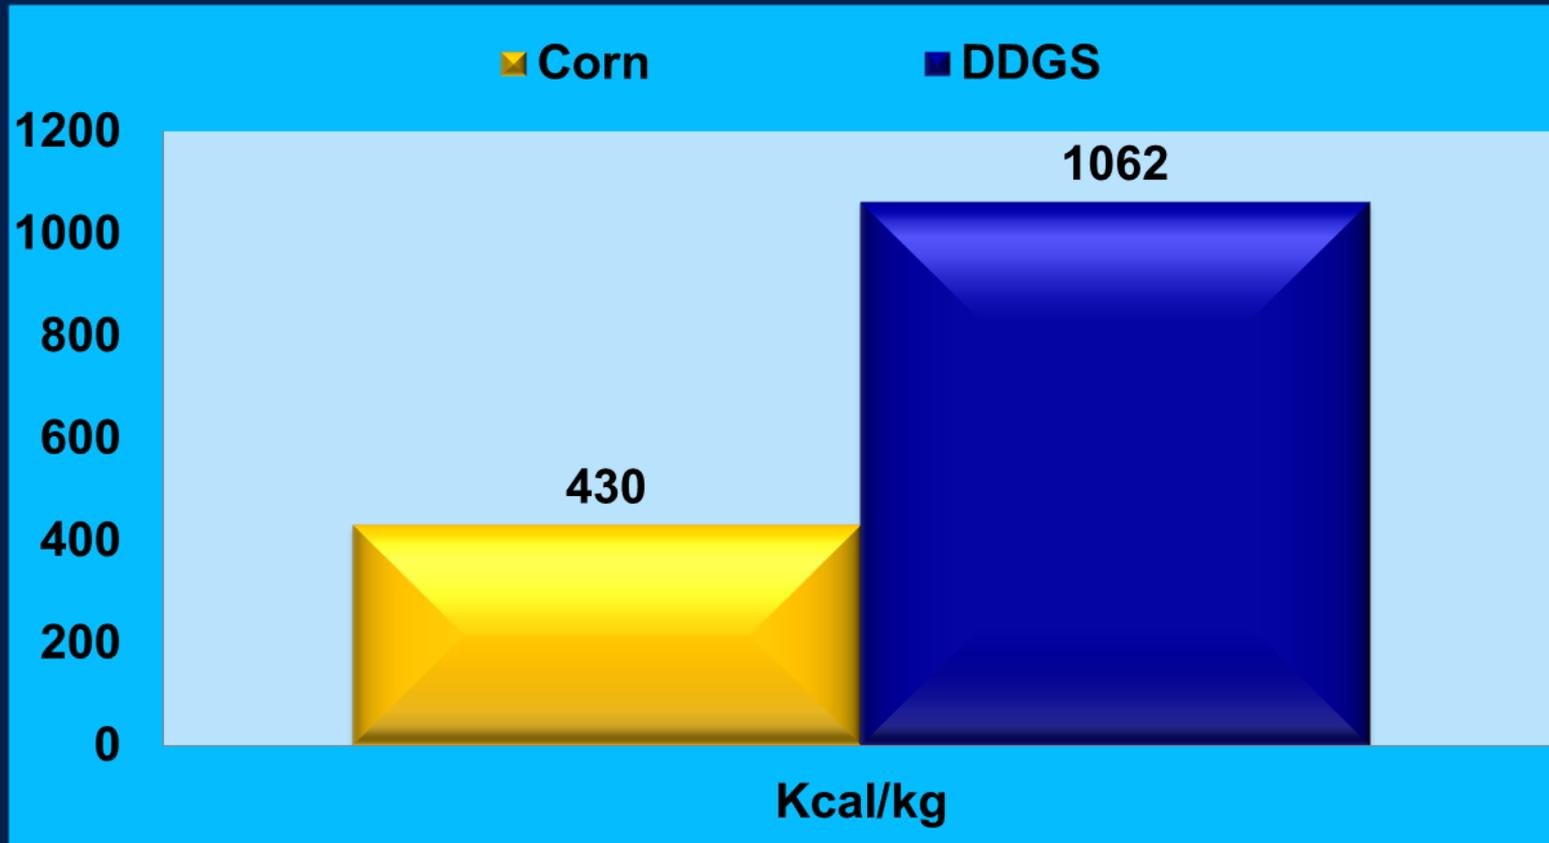

# ATTD (%) of GE

Corn: N = 25; DDGS, N = 17

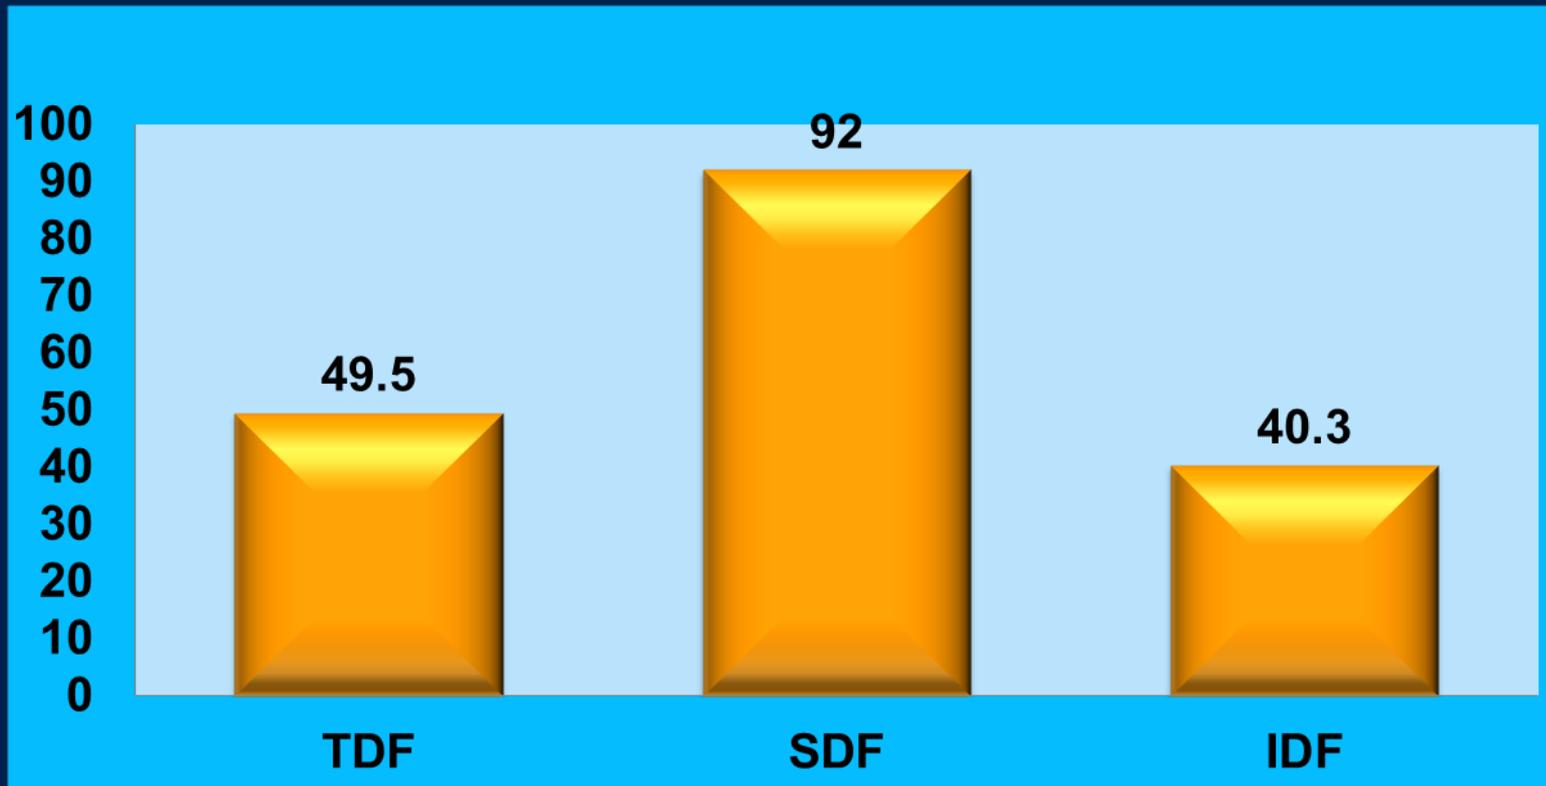

Univ. IL, 2014

# Un-utilized energy (Kcal/kg)

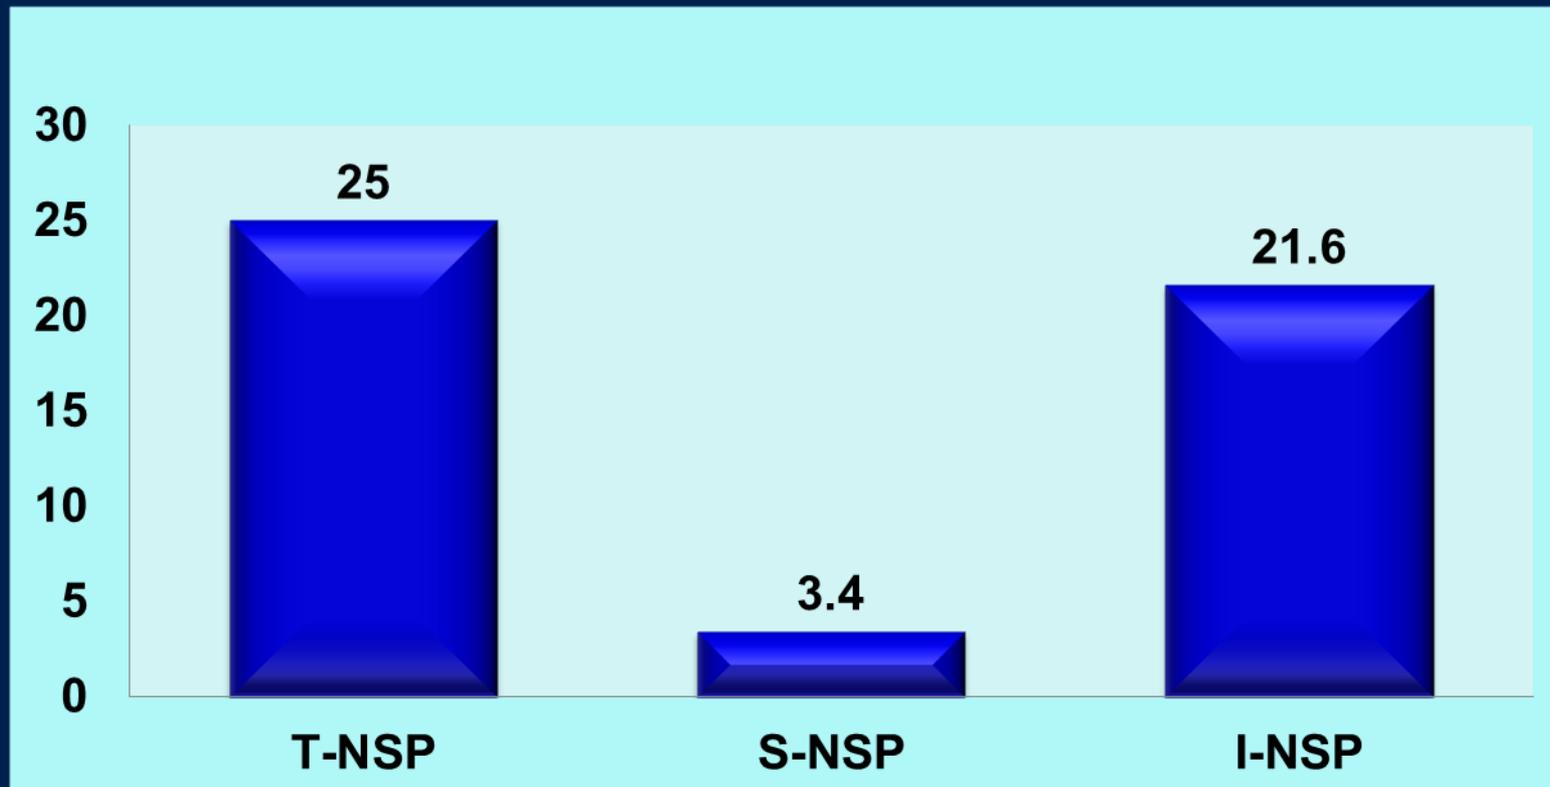

# Disappearance of Fiber (%)

Urriola et al., 2010

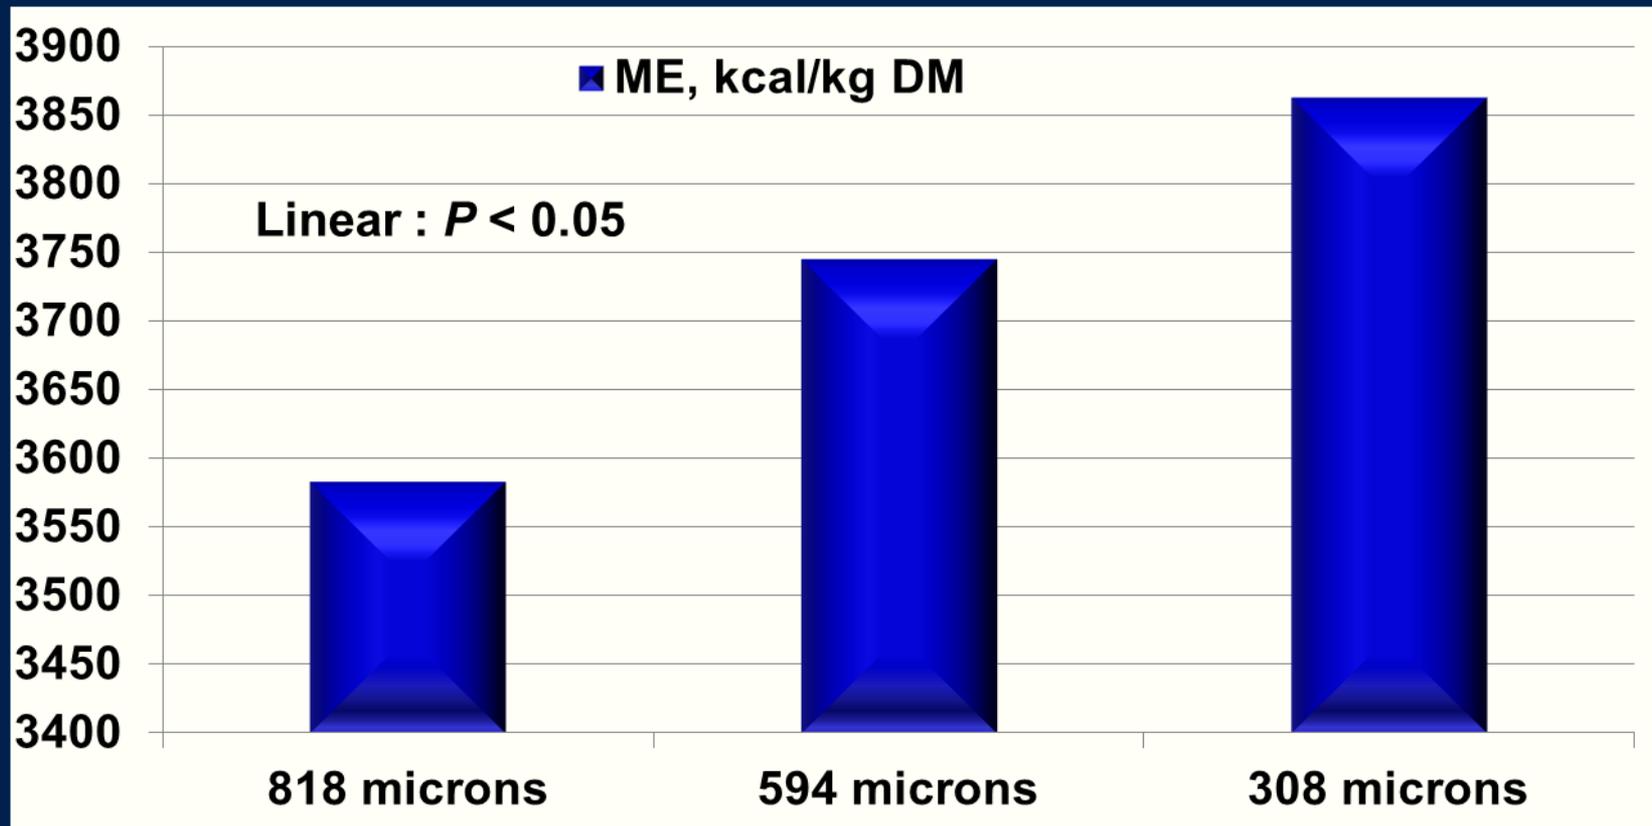

# Fiber in DDGS (%)

Jaworski, 2012

# Effects of Particle size on ME in DDGS

# Low-fat DDGS

# Low fat DDGS and De-oiled DDGS

- **Conventional DDGS:** > 9% Fat
- **Low-fat DDGS:** 5 to 9% Fat
- **De-oiled DDGS:** < 5% fat

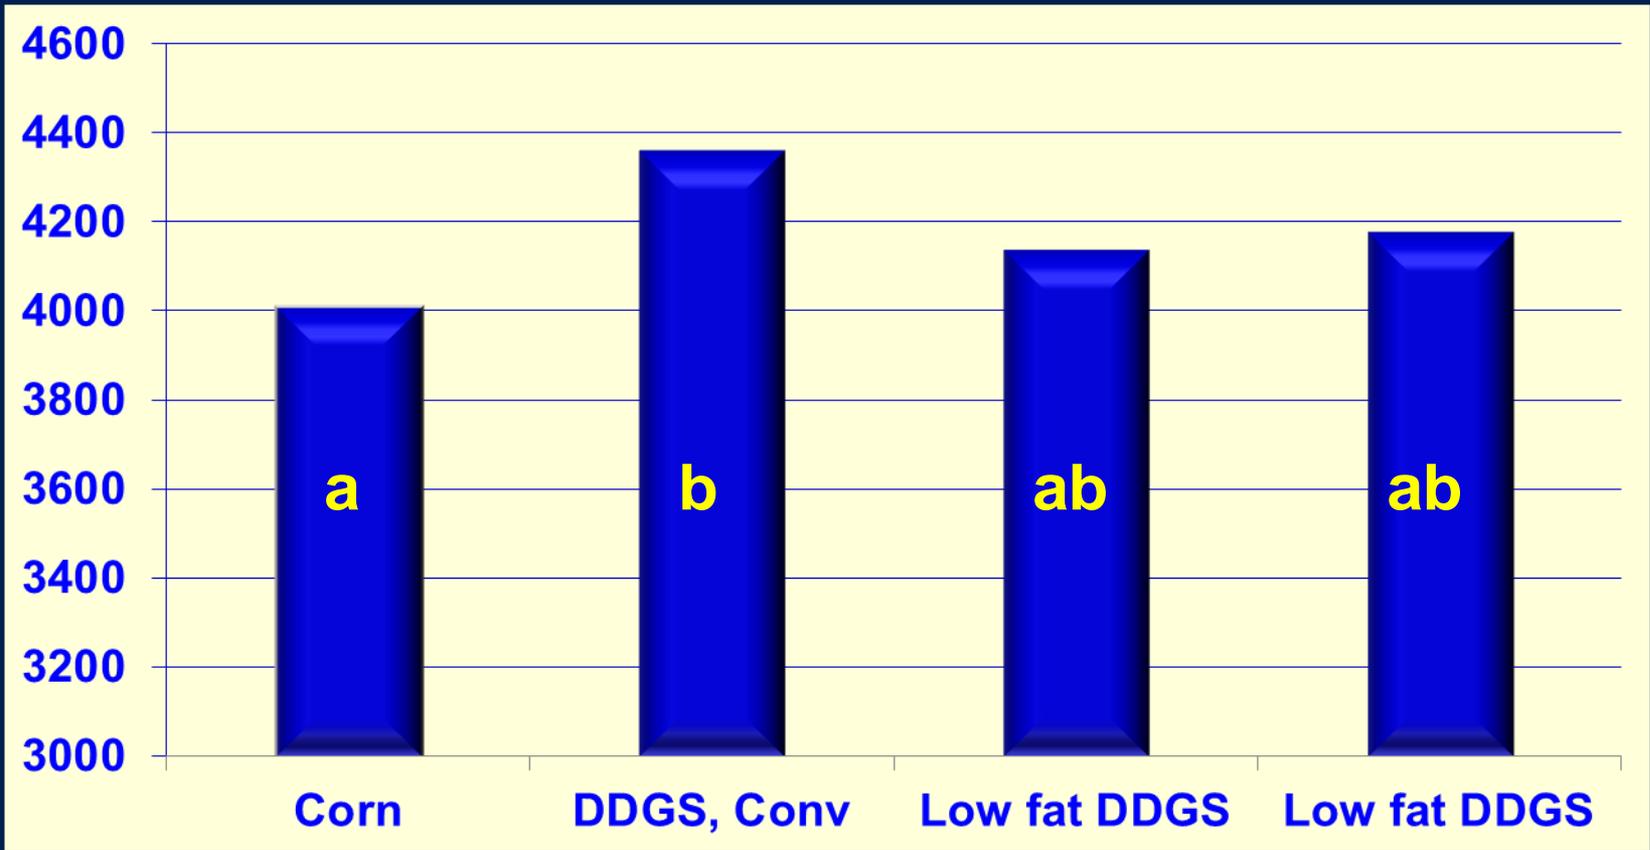

NRC, 2012

# Low Fat DDGS

Item	DDGS-conv.	Low fat DDGS	Low fat DDGS
Crude Protein, %	25.2	27.4	27.1
Fat, %	11.5	7.5	6.9
NDF, %	28.6	30.7	29.9
GE, kcal/kg DM	4,865	4,722	4,497

Navarro et al., 2013

# ME in Low Fat DDGS, kcal/kg DM

Navarro et al., 2013

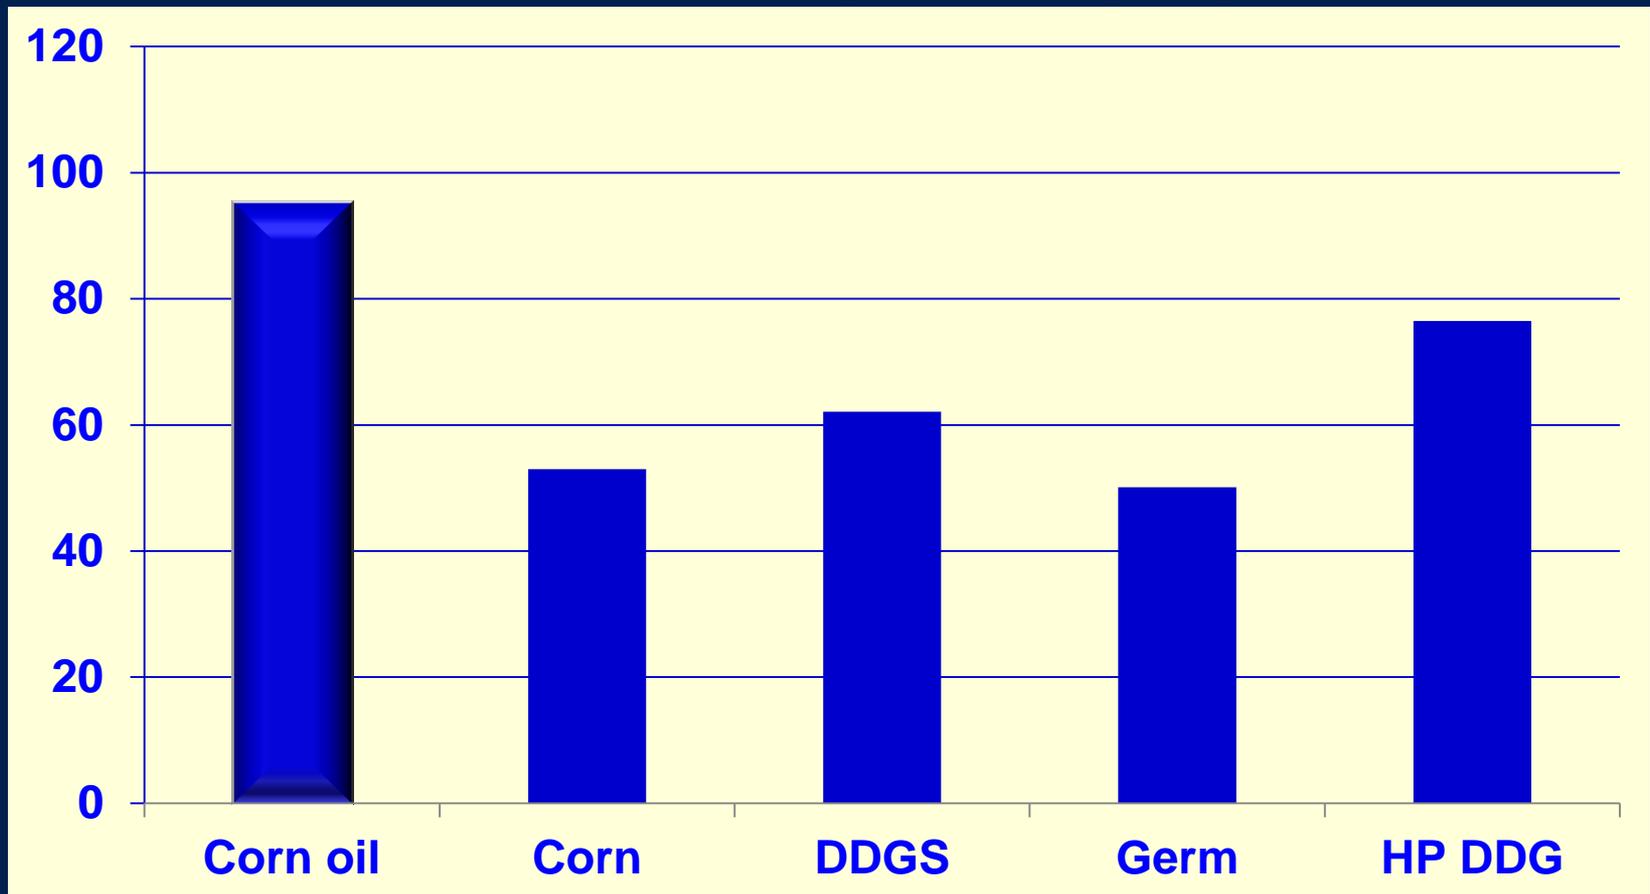

# Effect of fat on ME

Item	1	2	3	4
Fat, %	4.88	5.61	7.45	10.88
GE, Kcal/kg	4,780	4,841	4,943	5,113
ATTD of GE, %	74.65	79.11	70.77	75.70
ME, kcal/kg DM	3,698	4,060	3,630	4,110

Kerr et al., 2013

# TID of Lipids (%)

Kim et al., 2012

# De-oiled DDGS

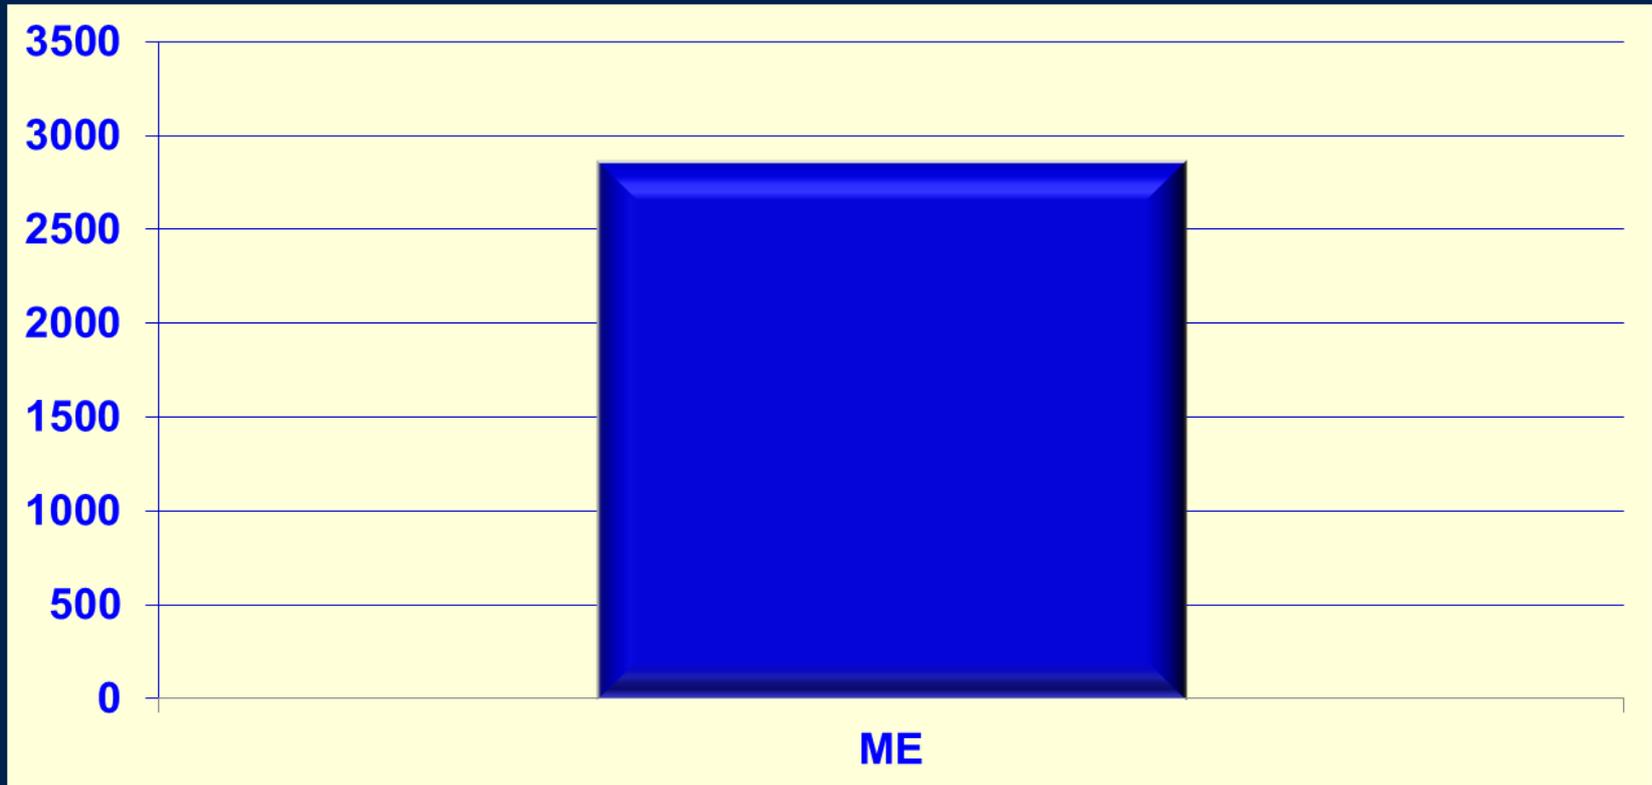

# De-oiled DDGS

Item	De-oiled DDGS
Crude Protein, %	<b>31.2</b>
Fat, %	<b>4.0</b>
NDF, %	<b>34.6</b>
GE, kcal/kg DM	<b>5,098</b>

Jacela et al., 2011

# De and ME in De-oiled DDGS, kcal/kg DM

Jacela et al., 2011

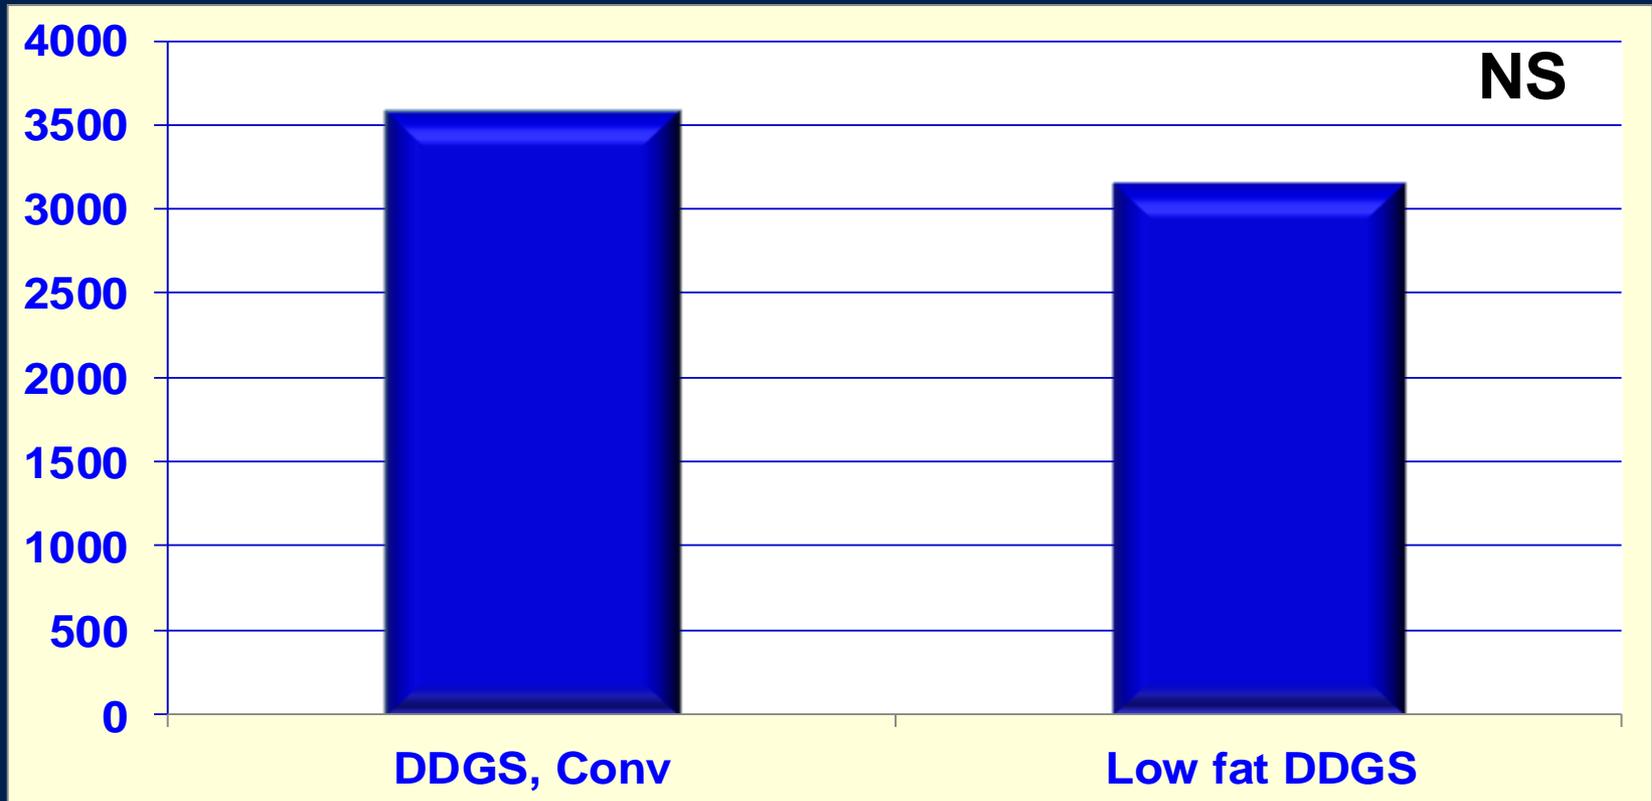

# Chinese De-oiled DDGS

Item	DDGS, Conv.	De-oiled DDGS
Crude Protein, %	26.6	28.7
Fat, %	9.24	3.5
NDF, %	36.0	37.9
GE, kcal/kg DM	4,833	4,473

Ren et al., 2011

# ME in Chinese De-oiled DDGS, kcal/kg DM

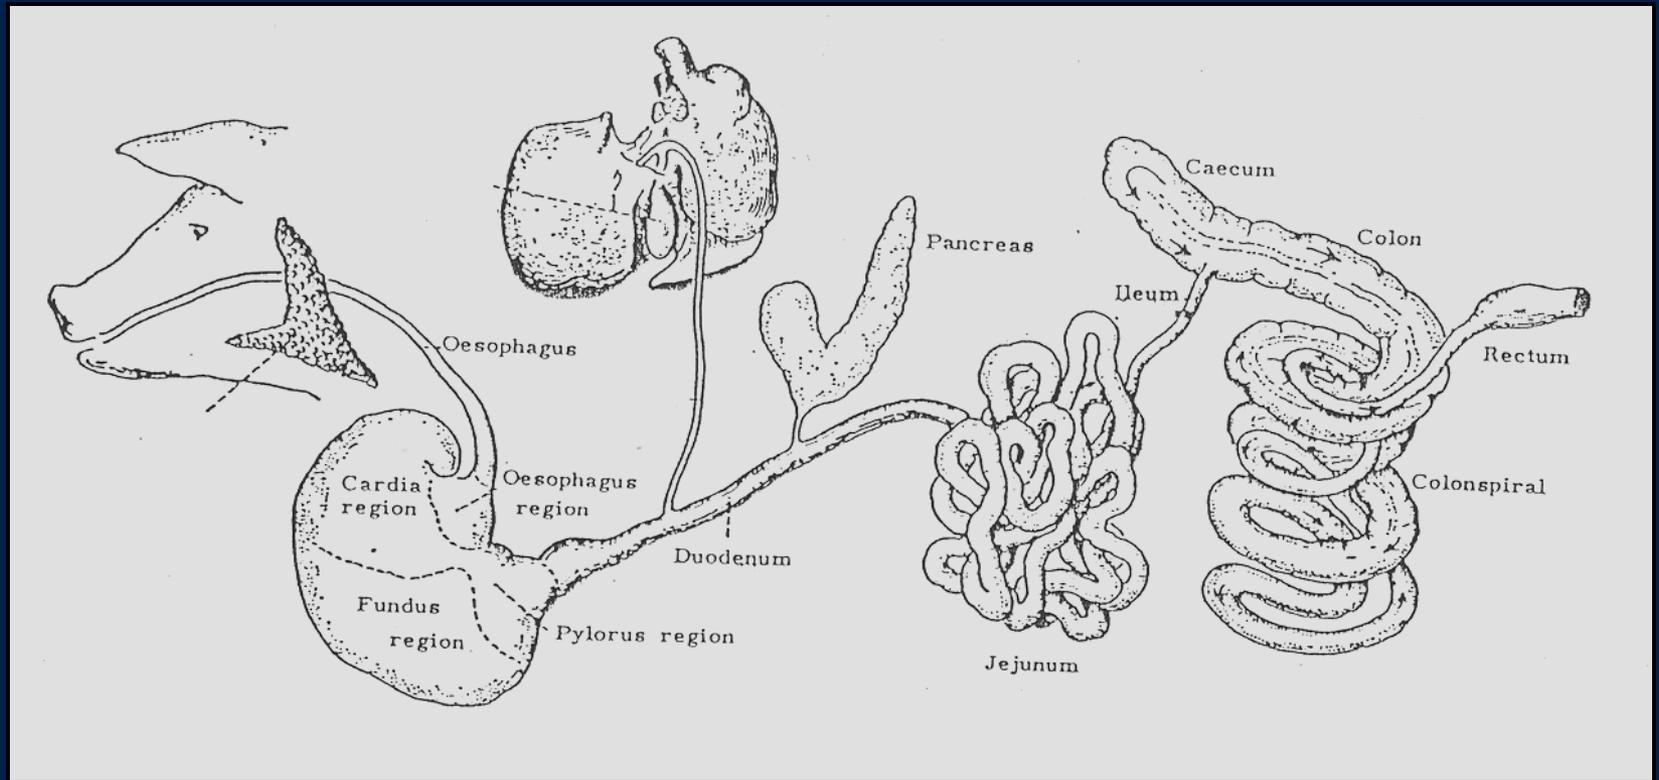

Ren et al., 2011

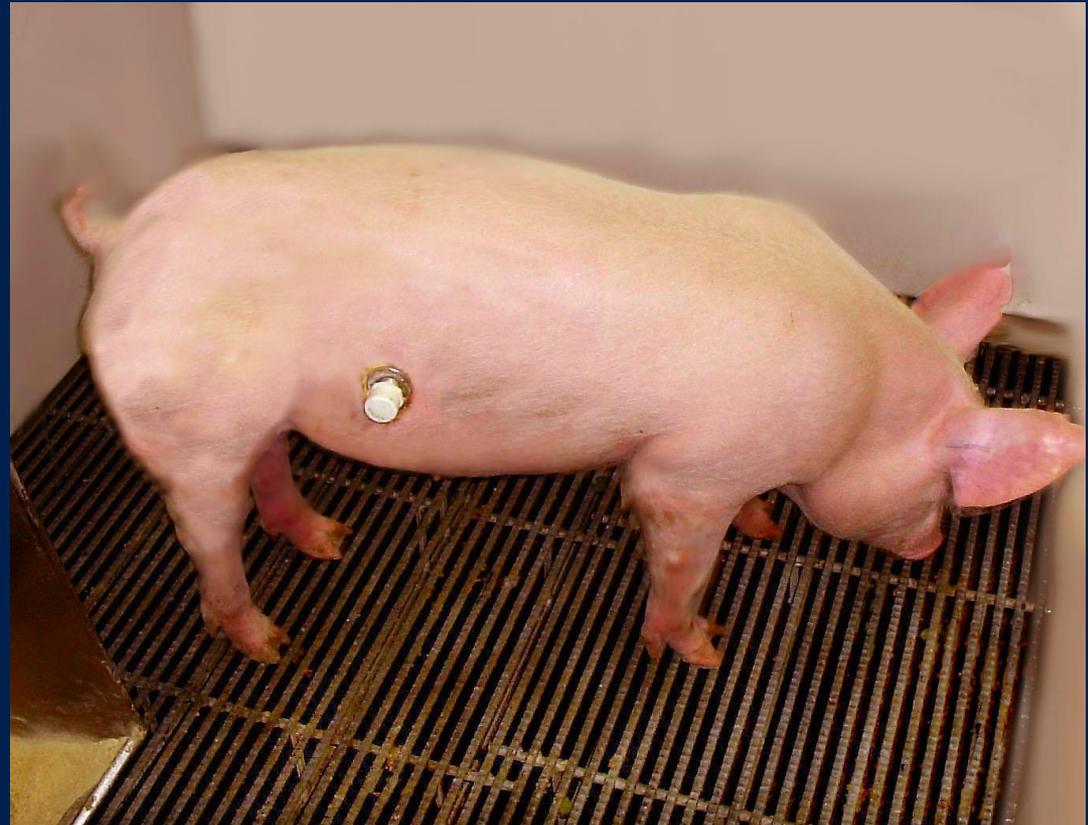

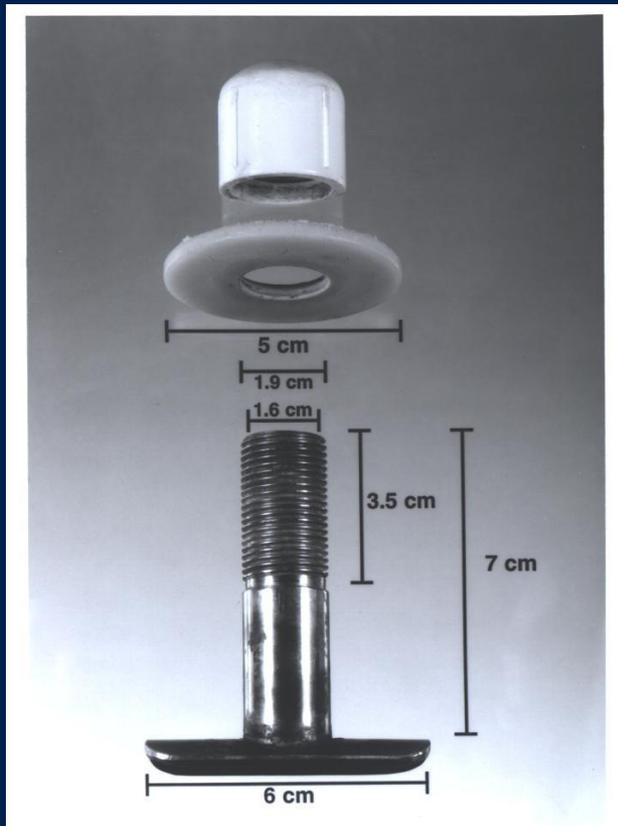

# Amino acid digestibility in low-fat DDGS

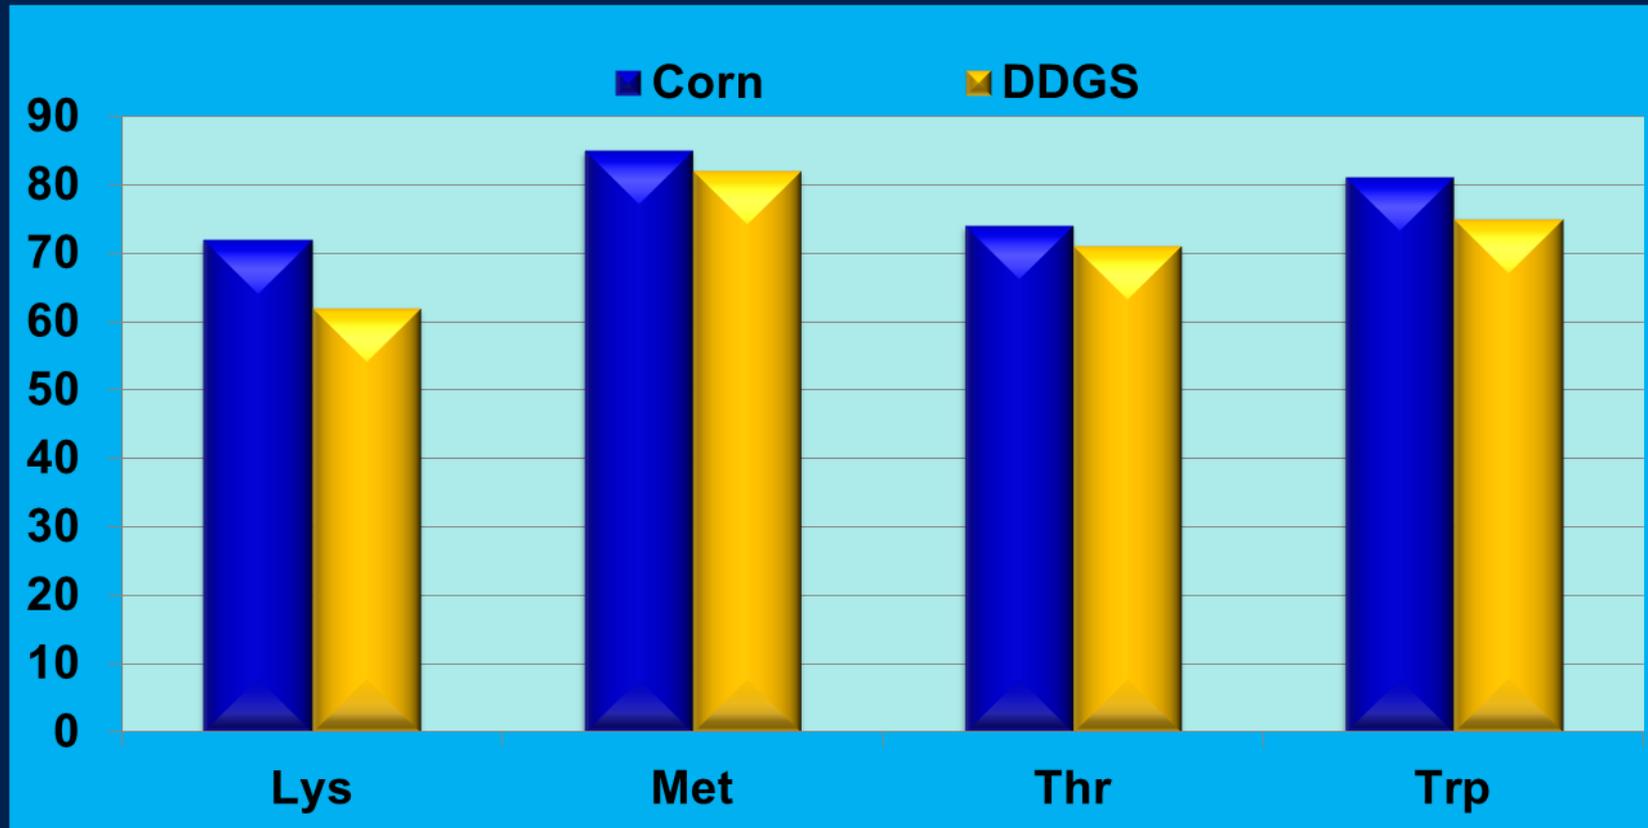

# Ileal AA Digestibility

# Ileal AA Digestibility

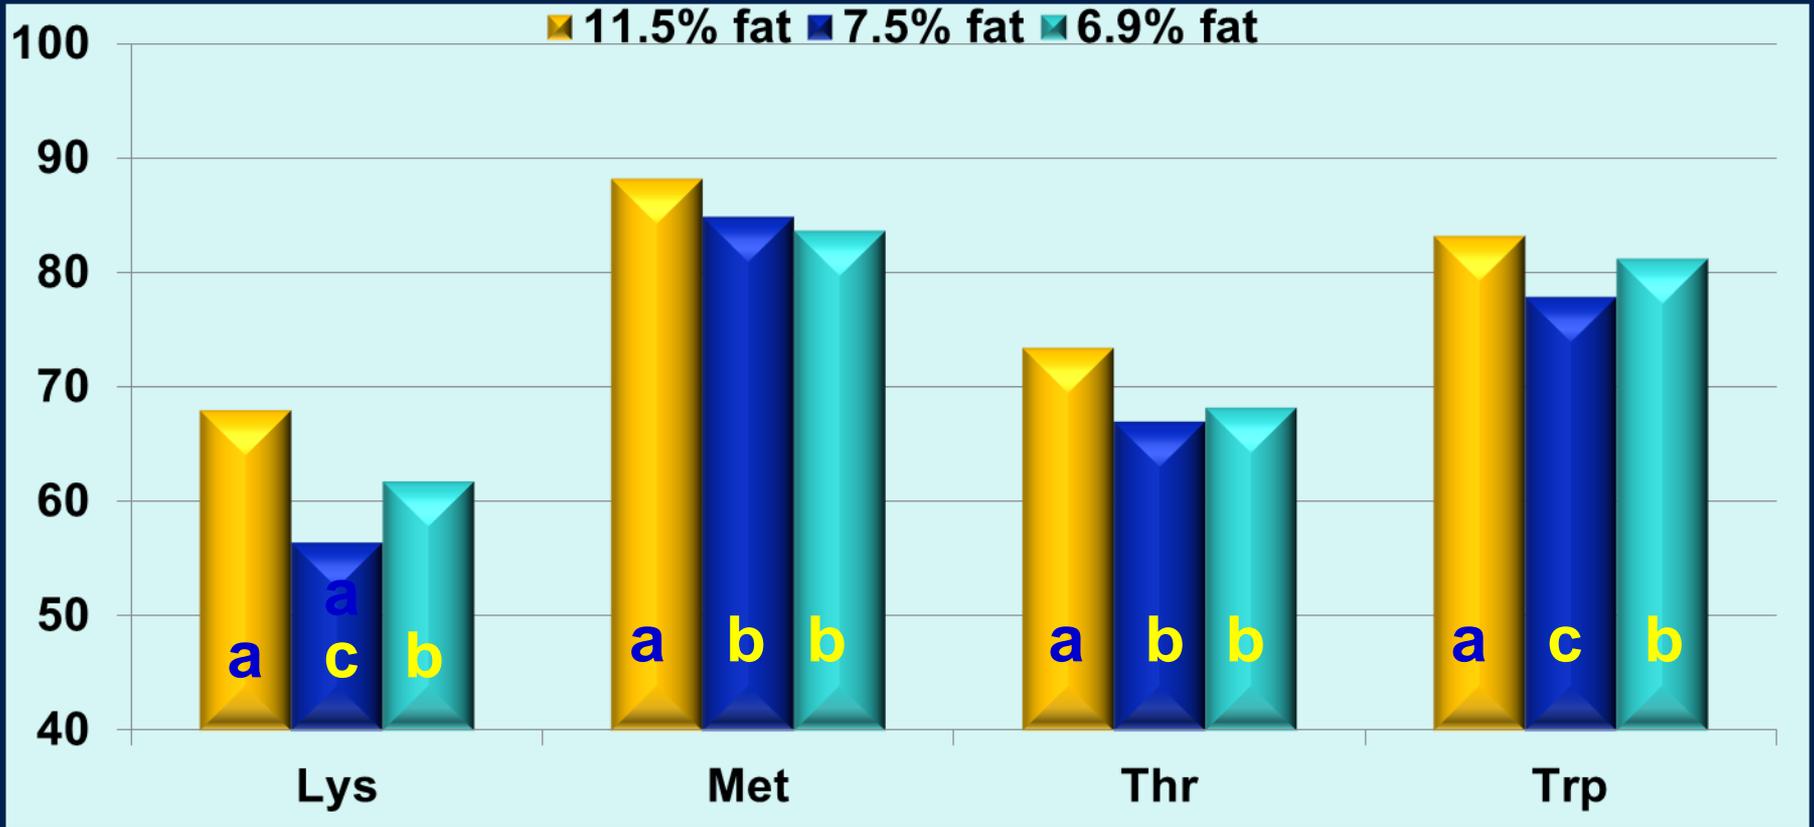

# SID AA (%)

Univ. IL, 2012

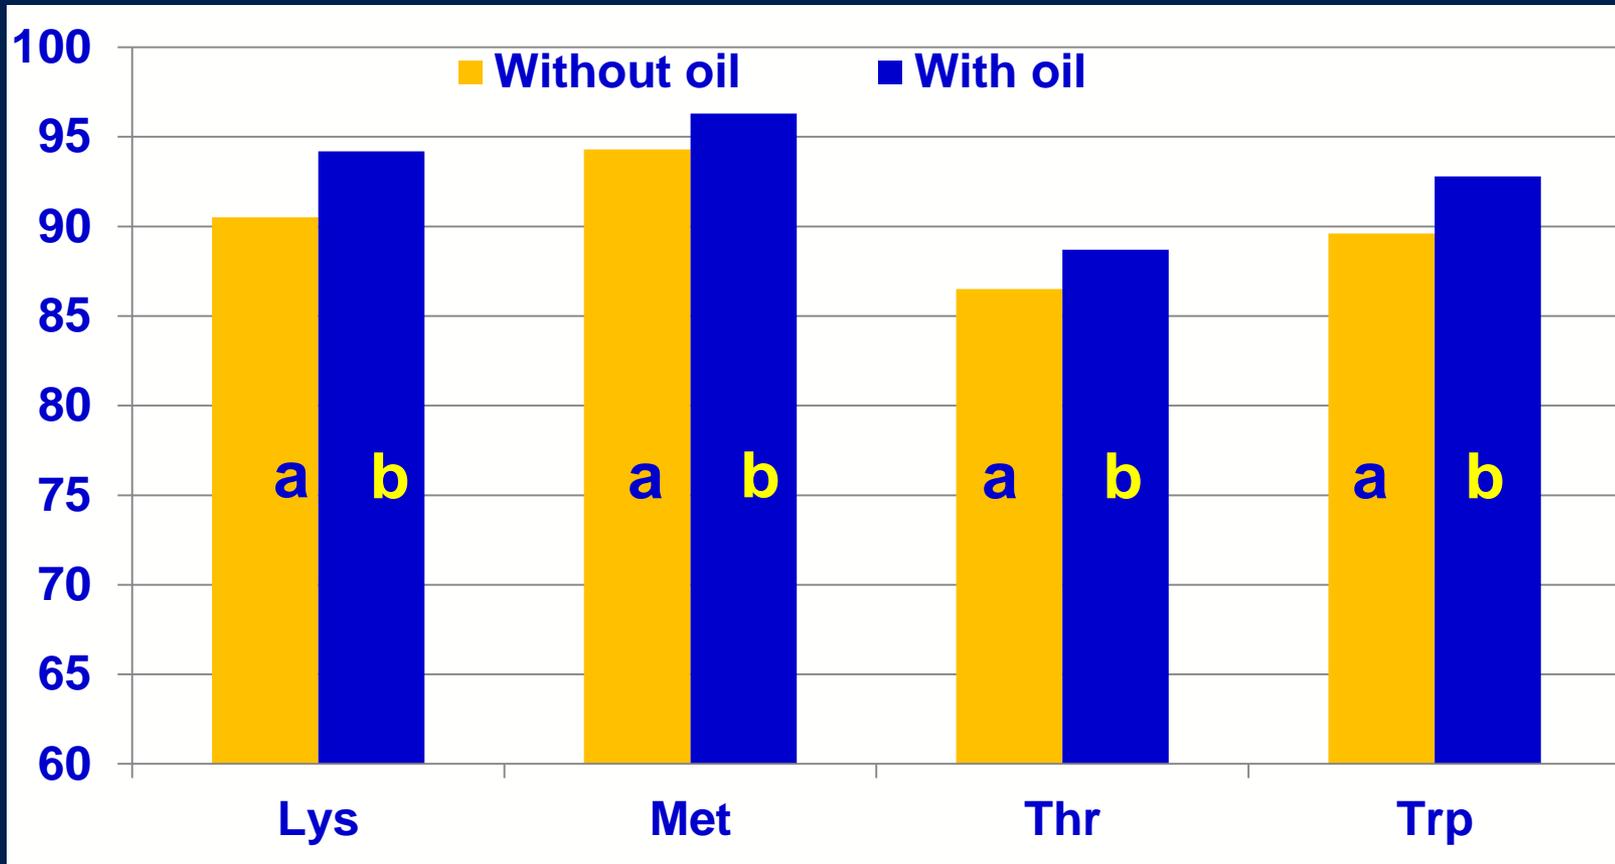

# SID AA (%)

Curry et al., 2014

# Effect of Oil on SID of AA in SBM and SPC

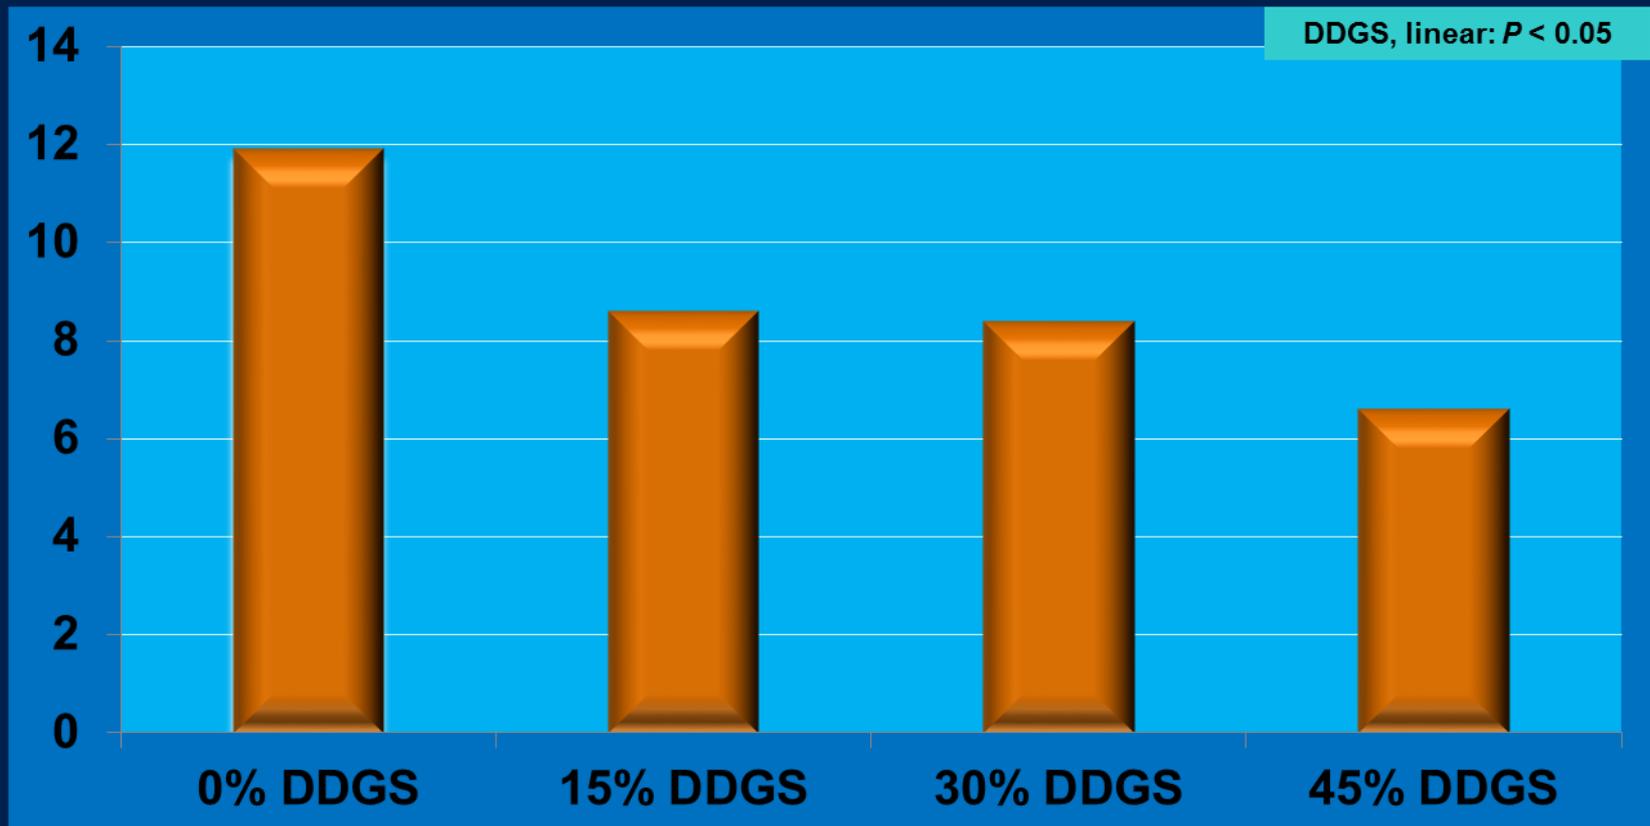

Cervantes-Pahm and Stein, 2008

# Positive effect of low-fat DDGS

# Belly flex, cm

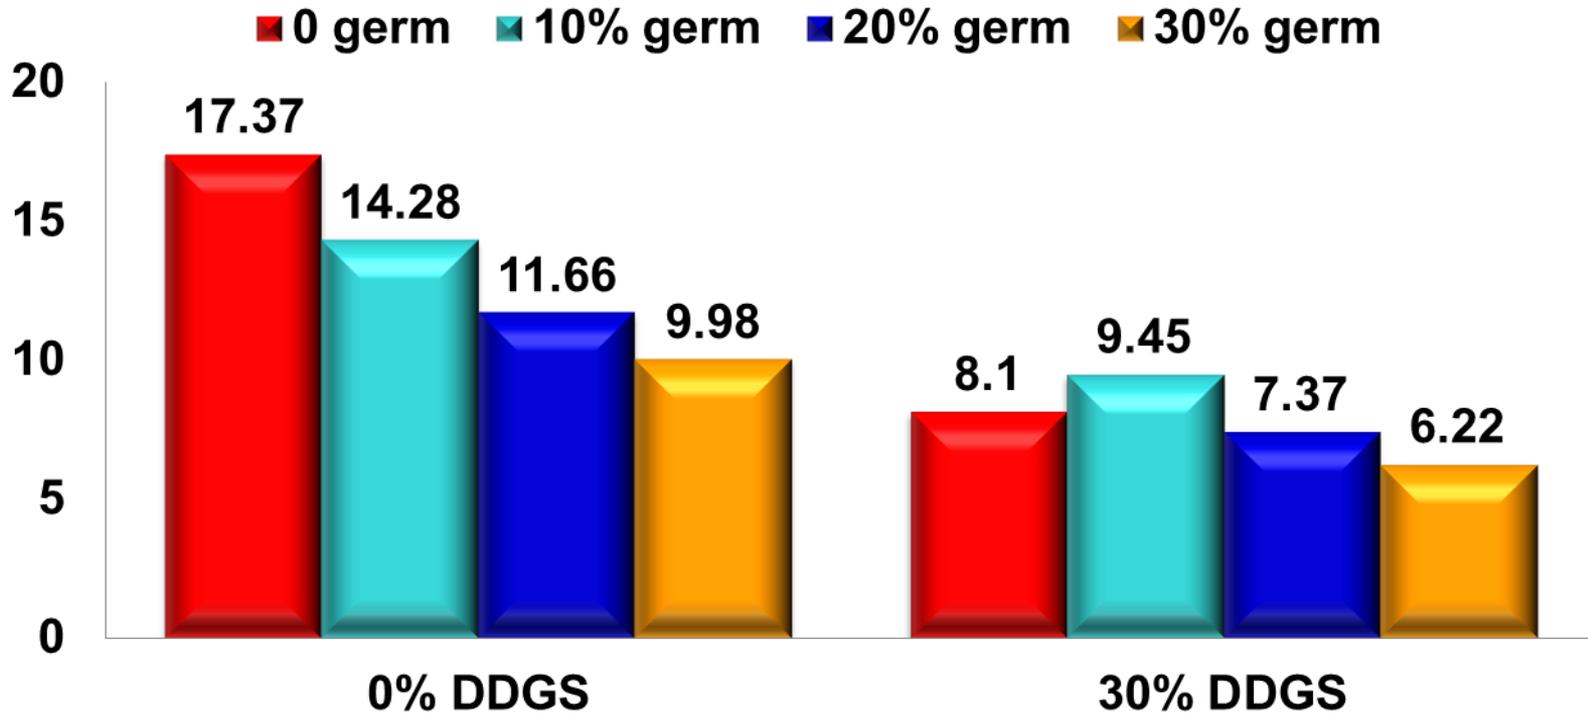

Cromwell et al., 2011

# Belly Flop Distance, cm

Germ:  $P < 0.05$

DDGS:  $P < 0.05$

Lee et al., 2012

# Conclusions

- **Energy value in conventional DDGS similar to corn**
- **Energy value in low-fat DDGS (5 – 9% fat) slightly less than in conventional DDGS**
  - **Probably no practical impact**
- **De-oiled DGGS significantly lower DE and ME**

# Conclusions, continued

- **AA digestibility may be reduced in low-oil DDGS**
- **Possible positive impact of low-oil DDGS on pork quality**
- **More data coming soon.**
