

# ANNUAL

CONFERENCE & EXPO 2018

## **Decision Making for Different Types of Variation in a Manufacturing System**

Xue Lei   Cameron MacKenzie   Caroline Krejci

Iowa State University (IMSE)

The University of Texas at Arlington

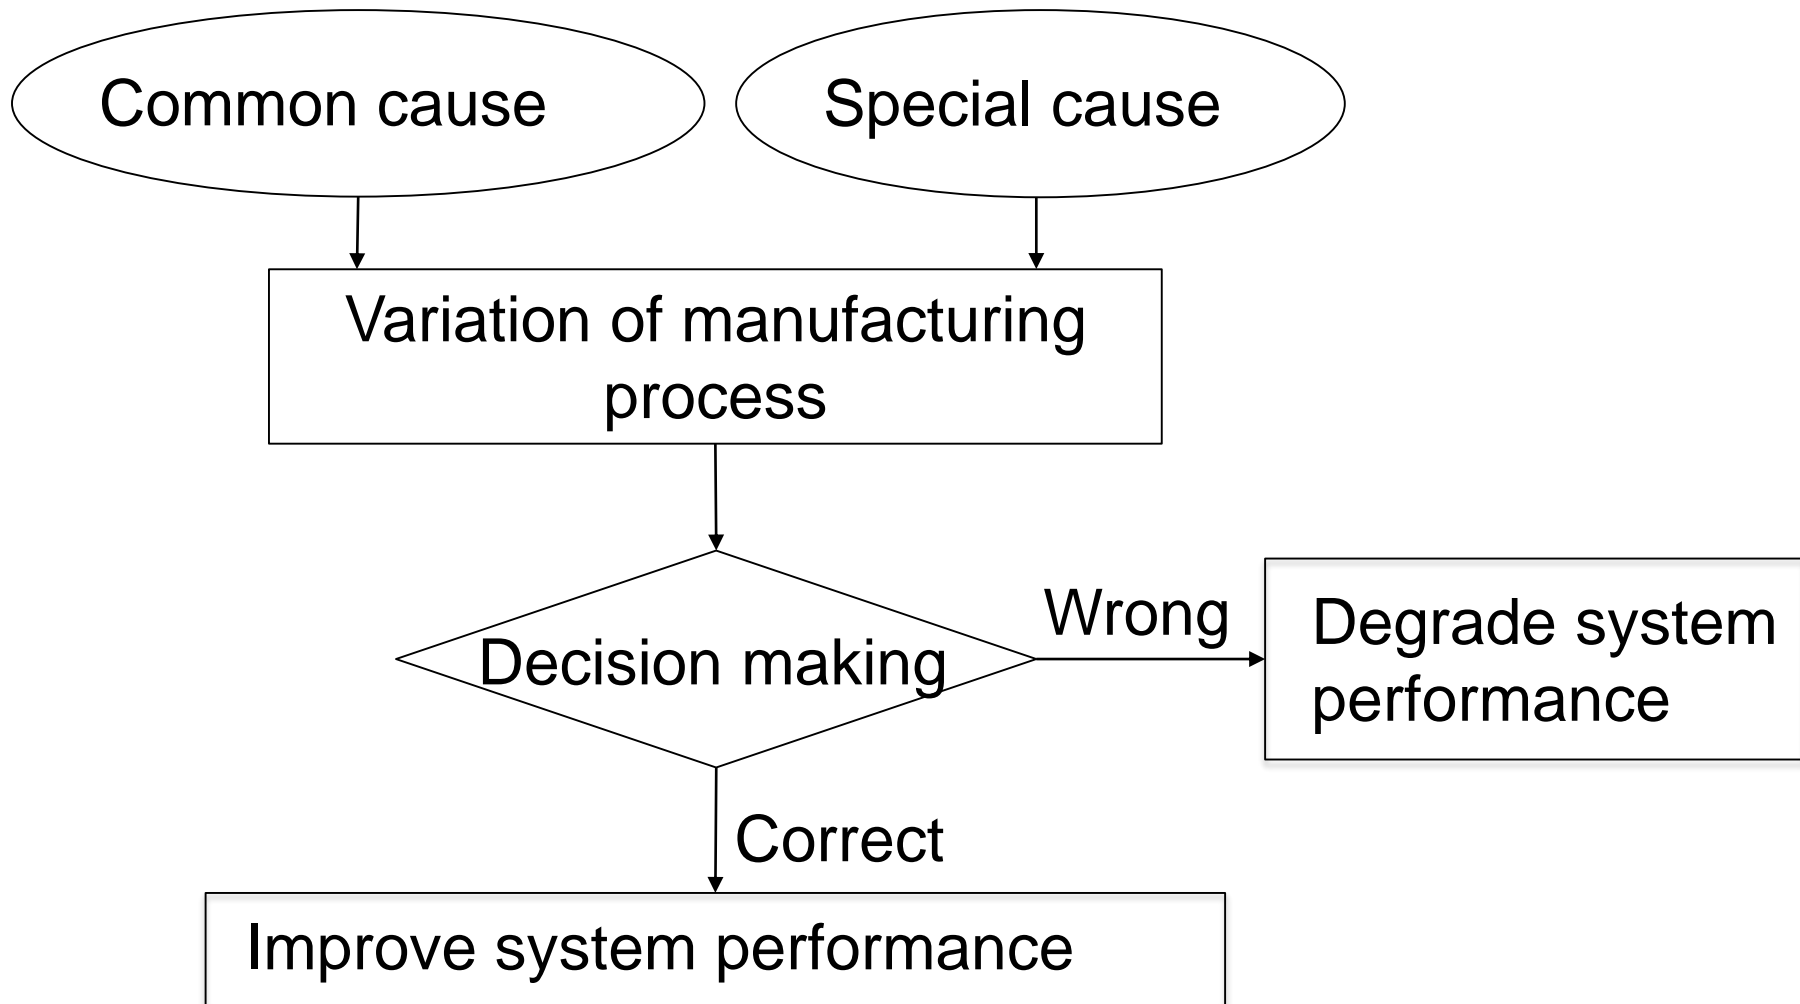

# Common cause variation

- Natural part of the process
- Acting on process

# Special cause variation

- From external sources
- Searching and mitigating causes

# Motivation

# Research goals

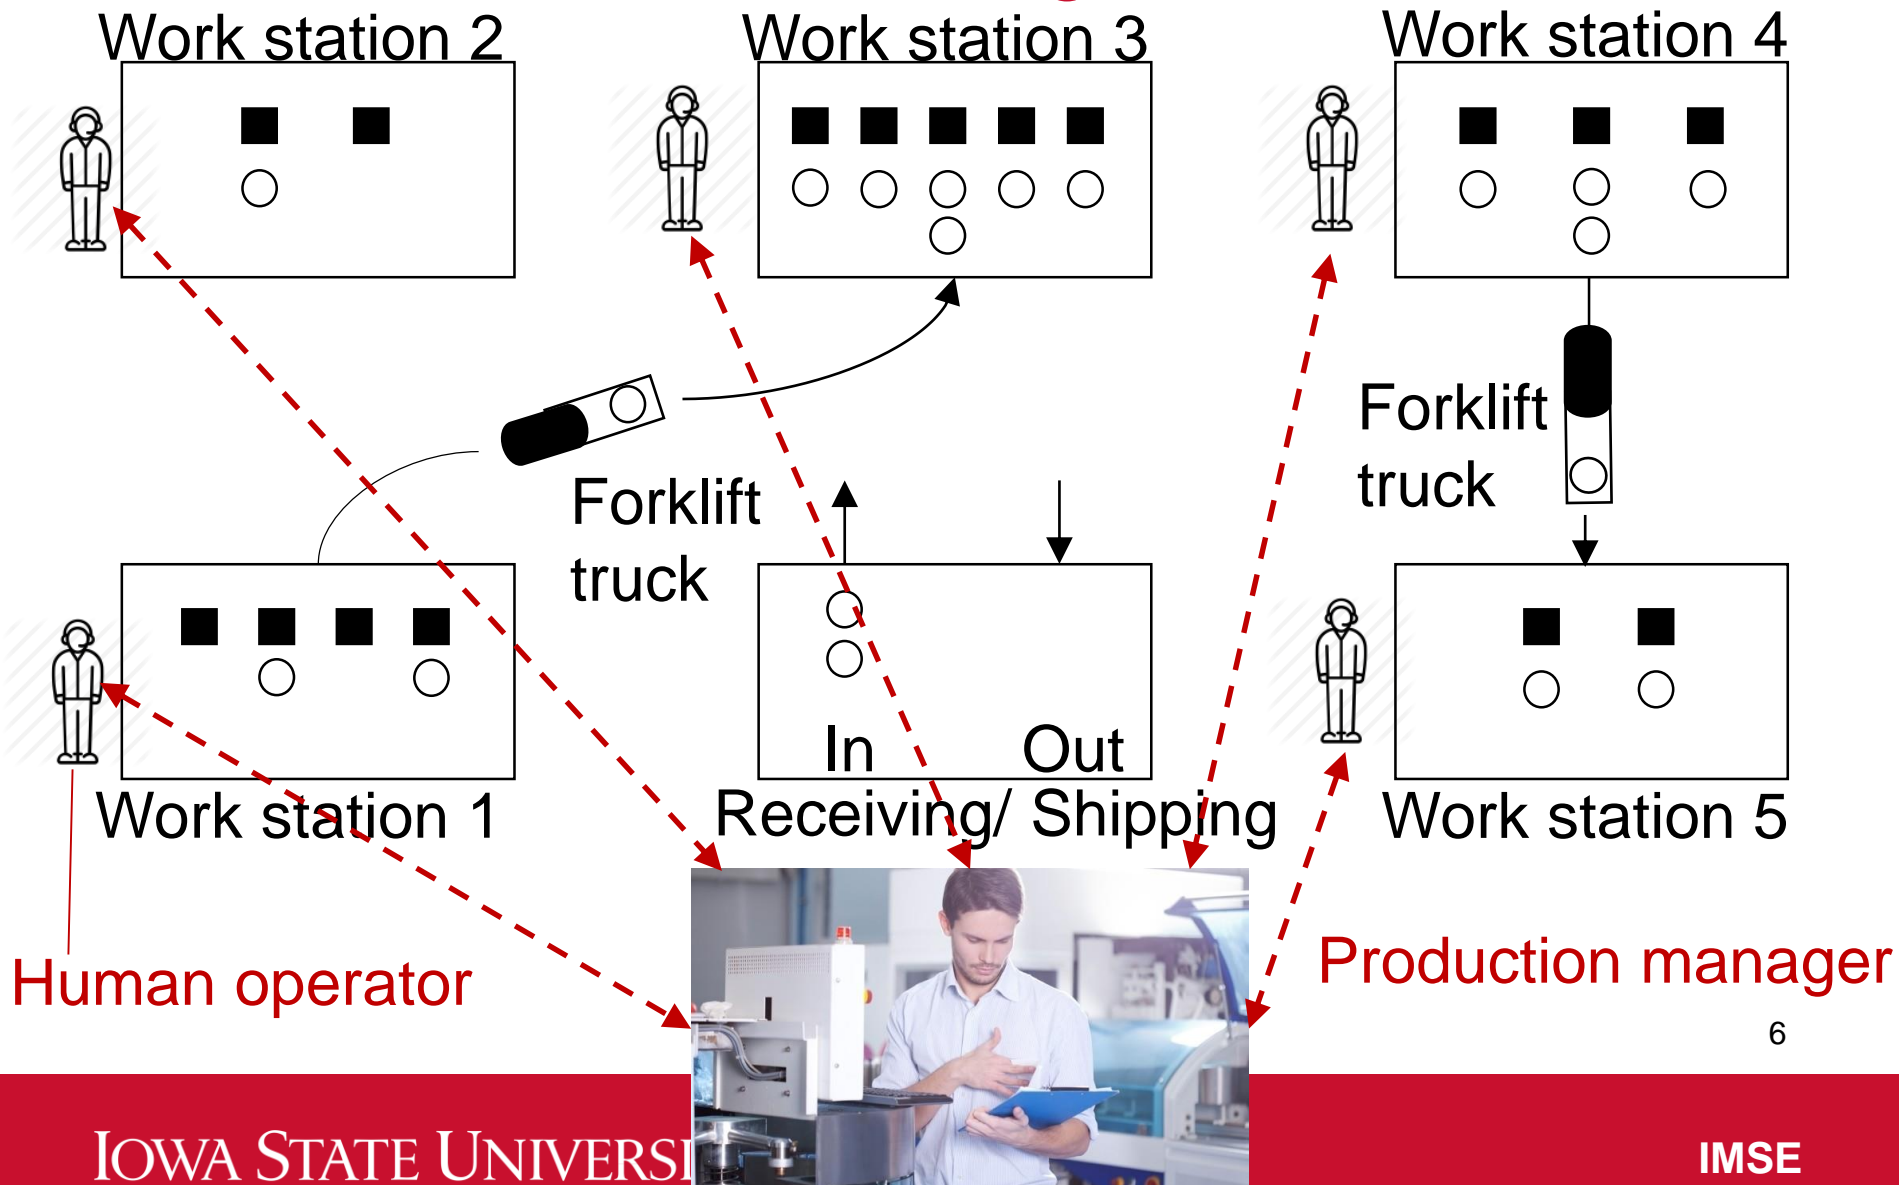

- Analyze and quantify how common cause variation and special cause variation impact system performance
- Simulate how human operators may
  - Interpret causes of variation
  - Make decisions to reduce causes of variation
- Quantify impact of decision making
  - If human operators correctly interpret variation
  - If human operations incorrectly interpret variation

# Simulation of manufacturing system

Law, A. M. *Simulation Modeling and Analysis*, 4th ed. New Delhi: Tata McGraw-Hill Publishing (2007).

# Human decision making

# Interaction within the decision team

Queue length  
for each  
station

⋮

**Manufacturing system**

Daily  
throughput of  
system

Cue

Instruction

Recommendation

**Shared mental model**

# Simulate decision making

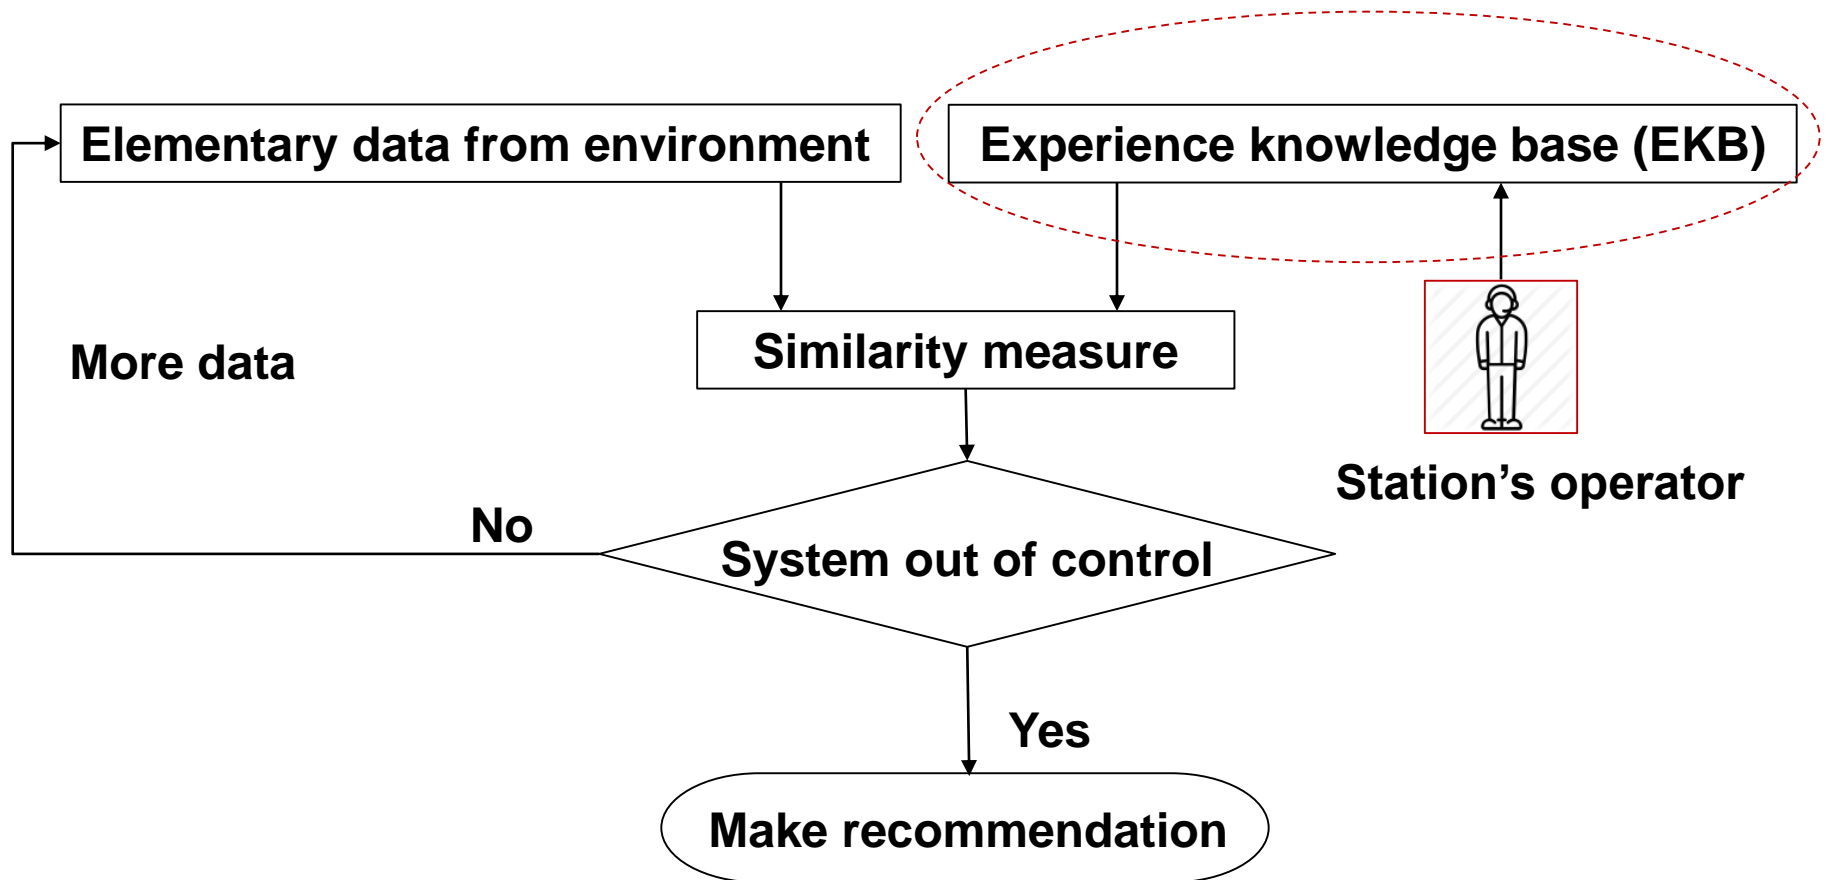

- How should each station operator give recommendations to the production manager?
- How should the production manager make decisions based on the recommendations and give the cues?

## **-Recognition-primed decision (RPD) model**

Klein, Gary A. *A recognition-primed decision (RPD) model of rapid decision making*. New York: Ablex Publishing Corporation, 1993.

# Modified RPD model for station's operator

# Experience Knowledge Base (EKB)

Station's  
operator

Production  
Manager

# Simulation

- Simulate manufacturing system (40 days) → control chart parameters
  - Daily throughput
  - Queue length for each station
- Use simulation to analyze how performance metrics change
  - If production team attempts to reduce common cause variation
  - If special cause variation is introduced
  - If production team misinterprets cause of variation (future work)

# Common cause and special cause variation

- Actions to reduce common cause variation
  - Change mean process time of station's machines
  - Reduce variation of process time of station's machines
  - Change mix of arriving jobs
- Special cause variation problems
  - Forklifts move more slowly
  - Machine breaks down
- Actions for special cause variation: identify system problem and fix problem

# Change mix of 3 job types

		1↑ 2↓ 3↓	1↓ 2↑ 3↓
Daily throughput	Mean	↓	≈
	STD	≈	≈
Queue length of station 1	Mean	↓↓	↓
	STD	↓↓	↓
Queue length of station 2	Mean	≈	↓
	STD	≈	↓
Queue length of station 3	Mean	≈	↑ (< 3)
	STD	≈	↑ (< 3)
Queue length of station 4	Mean	≈	≈
	STD	≈	≈
Queue length of station 5	Mean	↑↑	↓
	STD	↑↑	↓

13

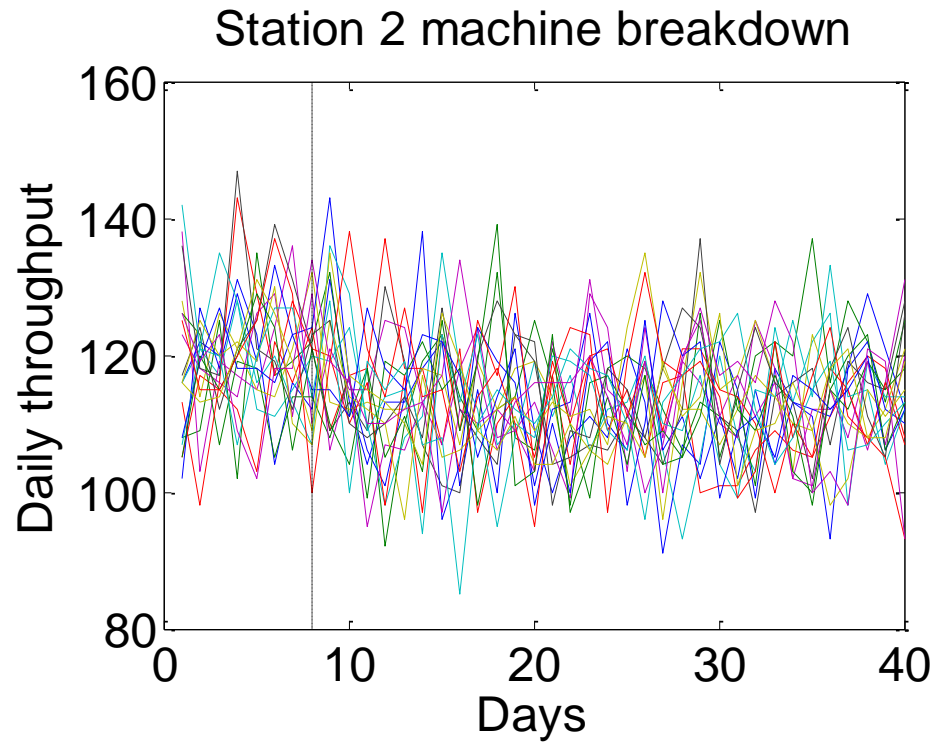

# Decrease one station's process time, increase another station's process time

		I	II	III
Daily throughput	Mean	≈	≈	≈
	STD	≈	≈	≈
Queue length of station 1	Mean	≈	≈	 ↓
	STD	≈	≈	 ↓
Queue length of station 2	Mean	 ↑ (< 1)	≈	≈
	STD	 ↑ (< 1)	≈	≈
Queue length of station 3	Mean	≈	 ↓	≈
	STD	≈	 ↓	≈
Queue length of station 4	Mean	≈	 ↑	≈
	STD	≈	 ↓	≈
Queue length of station 5	Mean	 ↓	≈	 ↑ ↓↓
	STD	 ↓	≈	 ↓↓

# Special cause variation: Machine breakdowns

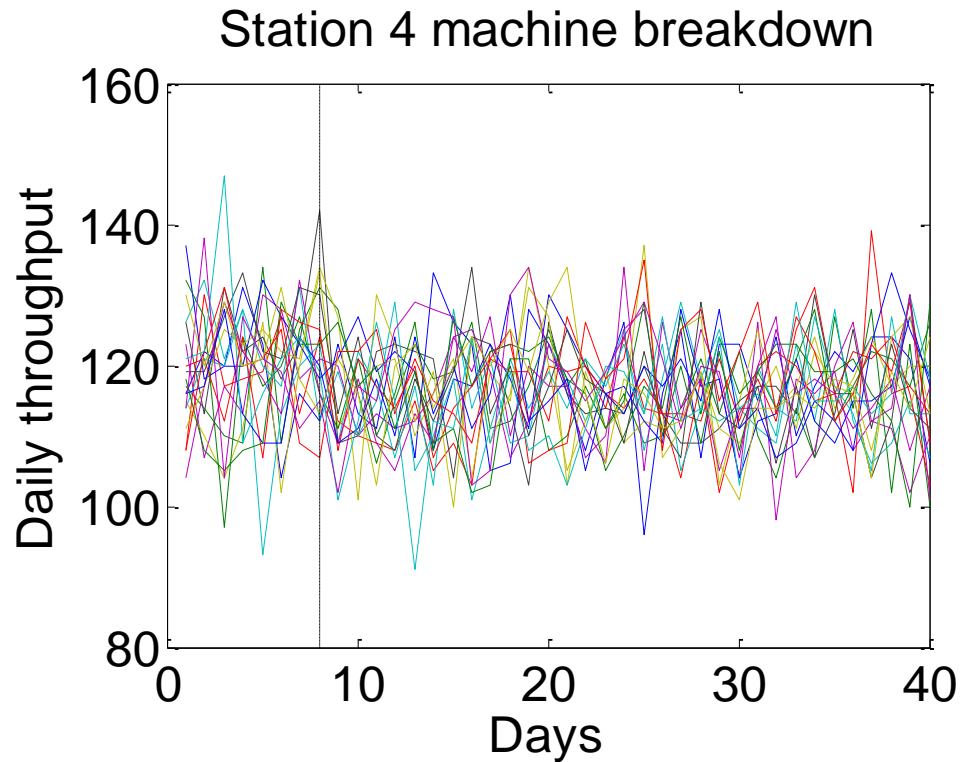

# Special cause variation: Machine breakdowns

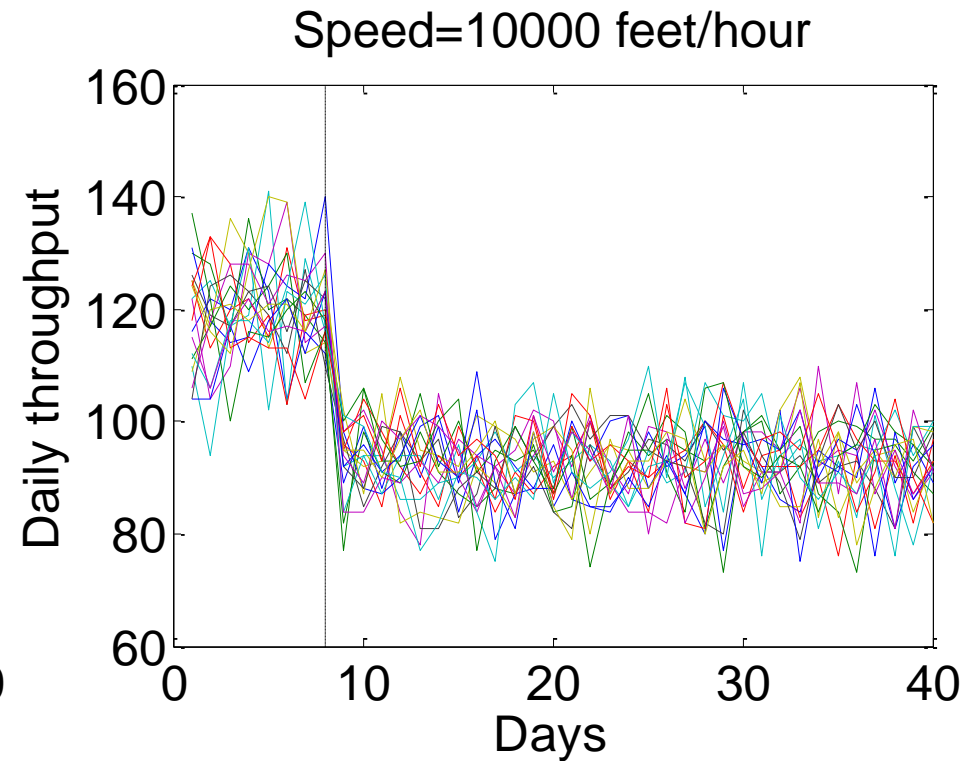

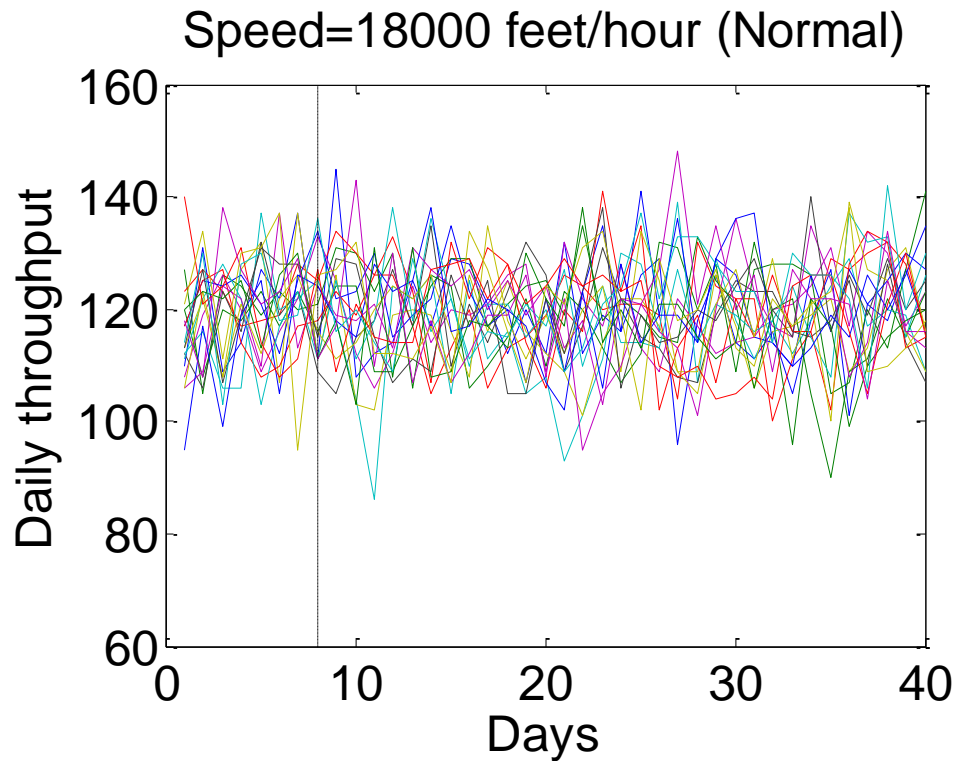

# Special cause variation: Machine breakdowns

# Special cause variation: Forklift trucks move more slowly

# Preliminary contributions

- Recognition-primed decision making model applied to manufacturing system
  - Embed interplay among decision team within the shared mental model
  - Represent knowledge base of experts through control charts
- The importance of distinguishing common cause variation and special cause variation
