

# WIND PHENØMENA

DANE BUCHHOLZ, ADAM SITZMANN  
*Arch 202, 2nd year*

---

The natural phenomenon that this project deals with is wind. Wind is an invisible occurrence, so we decided to use sound to record the wind. The machine goes on the user's head and seals off the feeling of the wind. When the wind blows on the pinwheels on all sides of the machine, the mechanism inside translates the wind into a recognizable clicking sound. This allows the user to hear which direction the wind is from rather than looking at their surroundings to find out, as well as telling the velocity of the wind based on the frequency of the clicking sound.
